PREAMBLE	3
1 OVERVIEW OF THE ONTOCHAIN OPEN CALLS	5
1.1 The ONTOCHAIN action	5
1.2 ONTOCHAIN Call 3	6
1.3 What are the ONTOCHAIN OC3 Topics to be addressed?	8
1.3.1 Objective A- ONTOCHAIN infrastructure complementary blocks	9
1.3.2 Objective B-Provision of ONTOCHAIN applications that cover real need in terms of trustworthy data/services exchange and trustworthy content handling for various vertical domains/vital sectors of the European economy	14
1.3.3 Deliverables	29
2 MODALITIES FOR APPLICATION	30
2.1 What types of projects will be eligible?	30
2.2 What happens after the proposals are submitted?	30
3 ELIGIBILITY CRITERIA	31
3.1 Types of Applicants	31
3.2 Eligible countries	31
3.3 Language	32
3.4 Proposal submission	32
3.4.1 Multiple submissions	32
3.4.2 Participation to the 3 ONTOCHAIN Calls and funding rules	33
3.4.3 Complaint due to a technical error of the ONTOCHAIN Online Submission Service	33
3.5 Confidentiality and deadline	34
3.6 Conflict of interest	34
3.7 Other	34
4 EVALUATION PROCESS	35
4.1 Proposal evaluation and access to the ONTOCHAIN funding	35
4.1.1 Admissibility and eligibility check	35
4.1.2 Proposal evaluation	36
4.1.3 Online interview and final selection	39
4.1.4 Scientific misconduct and research Integrity	40

4.2	The negotiation process.....	40
4.3	Monitoring process all along the sub-projects duration	41
5	FINANCIAL SUPPORT.....	42
5.1	Indicative distribution of the funds	42
5.2	Summary of the funding per type of beneficiary.....	44
5.3	Origin of the Funds and specific Provision regarding multiple beneficiaries 44	
6	PREPARATION AND SUBMISSION OF THE PROPOSALS.....	45
7	APPLICANTS COMMUNICATION FLOW.....	46
7.1	General communication procedure	46
7.2	Appeal procedure	46
8	SUPPORT SERVICES PROVIDED BY ONTOCHAIN TO THIRD PARTIES.....	47
8.1	The iExec computing platform	47
8.2	The patent web application myintellipatent	48
8.3	The specification from the 7 selected projects of Open Call 1	49
8.4	The selected projects of Open Call 2	50
9	INTELLECTUAL PROPERTY RIGHTS (IPR).....	53
9.1	IPR ownership of the sub-granted projects.....	53
9.2	Communication obligations	53
10	SUPPORT FOR THE APPLICANTS	53
11	INDICATIVE TIMELINES	53
12	ANNEXES.....	55
	Annex 1- Indicative sub-grant agreement form	55
	Annex 2- Administrative form.....	94
	Annex 3- Proposal description template	108
	Annex 4 - Additional Applicant(s) template	115

PREAMBLE

This document is the main document to support Applicant in the provision of their proposal. It provides the technical details for ONTOCHAIN Open call 3 as well as the modalities for application, the eligibility criteria, the evaluation process, the financial support, the preparation and submission of the proposal, ..., the support services and the indicative timelines as well as the requested information to prepare the administrative part of the proposal, the necessary template to be used to draft the proposal as well as an indicative agreement that will be signed if the proposal is successful. This guide is complemented by the Open Call 3 document available here <https://ontochain.ngi.eu/apply>.

In brief, the specific objectives of the ONTOCHAIN Open Call 3 are two folds:

Objective A- To complete the missing blocks of the ONTOCHAIN infrastructure in particular those related to :

- Service Integration (Gateways APIs) for ONTOCHAIN applications,
- Semantic Matching and Reasoning,
- Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services.

Objective B- To exploit the ONTOCHAIN infrastructure designed and implemented respectively through ONTOCHAIN OC1 and ONTOCHAIN OC2 for real life use cases that cover real needs of individuals in terms of trustworthy data/services exchange and trustworthy content handling from various vertical domains/vital sectors of the European economy.

The following table summarizes the topics of this call.

Topic id	Topic description
A1	Service Integration (Gateways APIs) for ONTOCHAIN applications
A2	Semantic Matching and Reasoning
A3	Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services
B1	Semantic Digital Logbooks for Companies, Buildings, Cars or similar
B2	Decentralised Fact Checking and Data Credibility for Social Content
B3	Decentralised Online Semantic Social Networks
B4	Semantic energy data management
B5	Smart City Applications Relying on Trustworthy Semantic Metadata

Topic id	Topic description
B6	Automotive, e.g., electric vehicle charging, road side management, car insurance, communication interoperability
B7	Distribution Logistics / Supply Chains Using Trustworthy Semantic Data
B8	Data/Digital content /Multimedia marketplace, including social media
B9	Semantics-based DAO
B10	Decentralised Public Services & Common Goods
B11	Remote Presence/Working and Metaverse
B12	Any other application in synergy with ONTOCHAIN objectives

The B1-B11 examples above are only indicative. Applicants can submit a proposal under any different topic, as long as it serves the overall ONTOCHAIN vision and objectives and fits within the formula Semantic Web + Blockchain. It should use as much as possible existing concepts and technologies of ONTOCHAIN and fit within its vision and objectives. It can be for example in relation with decentralised market places, DeFi and for the healthcare, tourism, agriculture sectors etc. **In any case, an attractive Level 7 open source solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. The proposed solution will have to use standard technology for full stack development, mechanisms that are already part of ONTOCHAIN services.**

The call is open for submission from the 23rd of May 2022 (12:00 PM CEST) until the 25th of July 2022 (17:00 CEST) and its indicative budget is € 1 673 000.

1 OVERVIEW OF THE ONTOCHAIN OPEN CALLS

1.1 THE ONTOCHAIN ACTION

Today, our digital life is an extension of our physical world and it demands the same critical, moral and ethical thinking. However, from the current standpoint and when it comes to exchange of knowledge and services, the Internet cannot assure that bias or systematic abuse of global trust are avoided. Several threats in the real-life scenarios of person's interaction with the Internet can be identified, e.g. corrupted information by malicious storage and network, or by censorship that can be shared and propagate to unforeseeable extent, daily decisions made on the basis of often uneven and unassessed information, revenue that service providers make through the web are not shared with the users that are publicly exposed to provide feedback and rate the services and similar.

In order to overcome these threats and make the Internet a resilient, trustworthy and sustainable means of knowledge and services exchange, the ONTOCHAIN research and innovation action proposes to create a software ecosystem that suitably employs scalable blockchain, decentralized reputation systems and semantic web technologies, in order to achieve trustworthy content handling and information exchange as well as trustworthy service exchange in the next generation Internet/social networks and for vital sectors of the European economy. It aims at demonstrating its potential in high impact verticals, such as eScience, eEducation, eHealth, eGovernment, eCommerce, eTourism, eInfrastructures and so on.

ONTOCHAIN - Trust traceable and transparent ontological knowledge on blockchain, is a European project funded by the European Commission under the European Union's Horizon 2020 Research and Innovation Programme and the call topic ICT-54. As such, it is part of the European Commission's Next Generation Internet (NGI) initiative. ONTOCHAIN was launched in September 2020 to empower Internet innovators with a novel software ecosystem for trusted, traceable and transparent ontological blockchain-based knowledge management through 3 Open Calls and a budget to be distributed of 4,2M€.

The 3 Open Calls are the following:

- **Call 1- Research 2020-2021**

The objective of this call was to establish the ONTOCHAIN framework as a human centric decentralised & trustworthy solution based on available technologies. This call was finished in October 2021, 17 projects have delivered a batch of specifications in the first phase and 7 remaining projects in phase 2 have provided the full ONTOCHAIN framework specifications.

- **Call 2- Protocol suite and software ecosystem foundations 2021-2022**

The objective of Call 2 was to build the ONTOCHAIN concept for the creation of a trustworthy information/service exchange process & a more trustworthy content

handling. This call is currently in progress and will enable the delivery of the ONTOCHAIN Framework prototypes.

- **Call 3- Application and experimentation 2022-2023**

The objective of Call 3 is to exploit the ONTOCHAIN solution formulated in Call 2 for real life use cases. This is the focal point of this guide.

Through these 3 Open Calls, the selected projects should have potential to entail a substantial advance in the state of the art, delivering new software solutions and services to the ONTOCHAIN software ecosystem with potential to improve the Internet infrastructure and/or reach the market in the short run.

Following the spirit of the H2020 Call ICT-54 Blockchain for the Next Generation Internet, **the ONTOCHAIN Research and Innovation Action encourages open-source software and open hardware design, open access to data, standardisation activities, access to testing and operational infrastructure as well as an IPR regime ensuring interoperability, reusability of results, lasting and sustainable impact.**

This guide is specifically dedicated to the **Open Call 3** and outlines the application modalities for this call.

1.2 ONTOCHAIN CALL 3

The specific objective of the ONTOCHAIN Open Call 3 are two folds:

Objective A- To complete the missing blocks of the ONTOCHAIN infrastructure in particular those related to:

- Service Integration (Gateways APIs) for ONTOCHAIN applications,
- Semantic Matching and Reasoning,
- Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services

Objective B- To exploit the ONTOCHAIN infrastructure designed and implemented respectively through ONTOCHAIN OC1 and ONTOCHAIN OC2 for real life use cases that cover real need of individuals in terms of trustworthy data/services exchange and trustworthy content handling from various vertical domains/vital sectors of the European economy. Applications domains that should be considered by applicants of the OC3 are provided hereafter. These are examples but are not limited to, as long as it serves the overall ONTOCHAIN vision and objectives:

“Develop scalable blockchain, decentralized reputation systems and semantic web technologies, in order to achieve trustworthy content handling and information exchange as well as trustworthy service exchange in the next generation Internet/social networks for vital sectors of the European economy”.

The OC3 call aims at selecting up to **14 projects** led and executed by a critical number of developers, innovators, researchers, SMEs and entrepreneurs among others, actively involved in research, development and application activities in the fields of Blockchain, Semantic Web, Ontology Engineering, Software Engineering, Cloud, Edge and Fog Computing, Ecosystem Economy, Smart Applications, Cryptography, Standardisation and similar. This will represent a comprehensive ecosystem. **Three of them will be selected according to excellence criteria and planned implementation outcomes for implementing the topics of objective A and the remaining 11 projects for implementing objective B which 11 Topics and open one are provided as examples of what kind of applications are expected. All of the 14 projects will last for a duration of 10 months.**

It is expected that applicants for the ONTOCHAIN Open Call 3 will develop interoperable and sustainable applications that employ both Semantic Web and Blockchain concepts to enhance data quality aspects (high-level semantics, completeness, data uniqueness, timeliness, validity, integrity, privacy, consistency, assets trading and monetization, tokenomics principles, the use of application-level proofs and decentralised digital identities etc.) and the trustworthiness of data communication and handling processes. Applications should be able to build on top of software services of the ONTOCHAIN ecosystem, and should cover real needs of end users from various vertical domains/vital sectors of the European economy.

As part of the action, experts in diverse fields will also provide to beneficiaries technology development guidance, working methodology as well as access to top infrastructure, training in business and data related topics, coaching, mentoring, visibility and community building support.

The call is open for submission from the 23rd of May 2022 (12:00 PM CEST) until the 25th of July 2022 (17:00 CEST) and its indicative budget is € 1 673 000.

Actions	Type of projects	Indicative No. of Projects	Duration	Indicative budget
Complete the missing blocks of the ONTOCHAIN infrastructure	Projects A	Up to 3	10 months	€ 358 500
Exploit the ONTOCHAIN infrastructure designed and implemented respectively through ONTOCHAIN OC1 and ONTOCHAIN OC2 for real life use cases that cover real need of individuals in	Projects B	Up to 11	10 months	€ 1 314 500

terms of trustworthy data/services exchange and trustworthy content handling from various vertical domains/vital sectors of the European economy				
--	--	--	--	--

Applicants will have to submit their proposal for one topic of OC3 objective A or for one topic of OC3 objective B. The topics of OC3 objective B are examples but applicants are not limited to these ones, as long as it serves the overall ONTOCHAIN vision and objectives (open topic) and that the proposed solution considers as minimal requirement to

- **Use standard technology for full stack development, to**
- **Be open source, and last but not least,**
- **Use mechanisms that are already part of ONTOCHAIN services.**

The topics under Objective A and B are further elaborated in the next section.

Applicants when applying should clearly specify the objective of the Open call 3 they are going to address as well as the specific topic.

1.3 WHAT ARE THE ONTOCHAIN OC3 TOPICS TO BE ADDRESSED?

All topics for the objectives A and B are summarised in the following table.

Topic id	Topic description
A1	Service Integration (Gateways APIs) for ONTOCHAIN applications
A2	Semantic Matching and Reasoning
A3	Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services
B1	Semantic Digital Logbooks for Companies, Buildings, Cars or similar
B2	Decentralised Fact Checking and Data Credibility for Social Content
B3	Decentralized Online Semantic Social Networks
B4	Semantic energy data management
B5	Smart City Applications relying on Trustworthy Semantic Metadata

Topic id	Topic description
B6	Automotive, e.g., electric vehicle charging, road side management, car insurance, communication interoperability
B7	Distribution Logistics / Supply Chains Using Trustworthy Semantic Data
B8	Data/Digital content /Multimedia marketplace, including social media
B9	Semantics-based DAO
B10	Decentralised Public Services & Common Goods
B11	Remote Presence/Working and Metaverse
B12	Any other application in synergy with ONTOCHAIN objectives

Whatever the objective A or B, each table hereafter, elaborates on the definition, the challenges, the requirements, the context and the expected outcomes to be addressed respectively by each topic.

1.3.1 Objective A- ONTOCHAIN infrastructure complementary blocks

TOPIC A1

Title	Service Integration (Gateways APIs) for ONTOCHAIN applications
Definition	<p>For this topic, the goal is to produce a service/application catalogue and expose its functionality internally and externally to facilitate software integration. The ONTOCHAIN network will embrace several applications and business cases; thus this topic must ensure that they will integrate smoothly together with the outside world. Of interest is also the accessibility of outside services within ONTOCHAIN, and of ONTOCHAIN services to the outside world.</p> <p>Interoperability whether or not cross chain but especially semantically and syntactically is thus a key aspect of this topic. The solution to be developed will have to be trustworthy, privacy-preserving, secure, transparent, democratic and consider traceability to manage access and operations over ontologies, metadata, data, knowledge and information for the ONTOCHAIN ecosystem.</p>
Challenges	<p>The challenge will be to provide a unified entry point to all ONTOCHAIN services and applications while retaining critical properties such as trust, consistency and security of data and services which are all paramount to mass adoption. The proposed solution must ensure that semantic information, trust, identities and privacy are preserved while maintaining the highest possible level of</p>

	<p>security. On-chain and off-chain ontology management will have to take into account the trade-offs between the cost and benefits of storing metadata on-chain versus the cost and benefits of storing metadata off-chain.</p> <p>The challenge will also be to design solutions for integration of databases and knowledge bases with blockchain protocols, thus providing specific trustworthy properties to databases and at the same time high-quality of service in the operation of the knowledge management systems.</p>
<p>Requirements</p>	<p>The Gateway APIs and integrated services will have to use standard technology for full stack development and the results will have to be open source.</p> <p>The proposed solution will have to implement the APIs defined in ONTOCHAIN deliverable D3.4-Framework-specification.pdf (ngi.eu) (for account management, services discovery, etc.) and support all ONTOCHAIN Open Call 1 and Open Call 2 services and APIs, as defined in their individual deliverables. Concretely, this involves integrating all OC1 and OC2 projects in the service catalogue and providing their endpoint to client applications. The GUI frontend and the service catalogue will have to support all exploitable results from OC1 and OC2 projects (Complete list at Selected Projects ONTOCHAIN (ngi.eu)).</p> <p>Ontologies for resource models, reputation models, Trustworthy information and knowledge management operations for content, services, clusters, hierarchies or similar will have to be seriously considered as well as the two following aspects:</p> <ul style="list-style-type: none"> o Management of ontologies' operations (CRUD) through blockchain smart contracts o Validation of the correctness of ontology data instance via blockchain
<p>Context</p>	<p>Proposals should position the proposed solution on a landscape of existing services and platforms in particular all exploitable results from ONTOCHAIN OC1 and ONTOCHAIN OC2 projects (Complete list at Selected Projects ONTOCHAIN (ngi.eu))</p>
<p>Expected outcomes</p>	<p>The proposed solution will become the main point of entry to the ONTOCHAIN platform both for end-users and for programs. It will be the ONTOCHAIN interface to be used by new users to create an account, to access ONTOCHAIN store, to navigate the ONTOCHAIN available services and use the ones of interest. In addition, APIs will be the default way for external applications to discover ONTOCHAIN services and start using them programmatically. In particular, it is expected:</p> <ul style="list-style-type: none"> o New connectors between blockchains (e.g. Ethereum Smart Contracts) and production databases and ontological knowledge; o Decentralized storage medium for ontologies in OWL and similar standard formats;

	<ul style="list-style-type: none"> • Free software libraries for interconnecting existing ontological systems with ONTOCHAIN and associated; • Scalable API endpoint for connecting clients to ONTOCHAIN applications and services; • Modern security protocols and standards to provide the highest level of security to the users. <p>Specific use cases are expected to be as follow: User account creation, developer/service provider account creation, listing of new service/application, along with metadata, display of registered services/applications in the catalogue, like a app store, search engine for services/applications that match specific criteria from a GUI, search engine for services/applications that match specific criteria from an API, filtering of results through GUI and APIs, access to services endpoints directly from the APIs, so that programs can query the catalogue and use results programmatically, admin interface to manage user accounts, developer accounts, applications and services.</p>
--	--

TOPIC A2

Title	<ul style="list-style-type: none"> • Semantic Matching and Reasoning
Definition	<p>Schema matching is a critical step in many applications, such as XML message mapping, data warehouse loading, and schema integration. For this topic, the goal is to develop a marketplace where ONTOCHAIN users can buy or sell any goods or services that can be described with an ontological representation. The resulting software will provide services for publishing ontology-based descriptions of goods and services, creating and publishing market orders, searching through the orders based and complex criteria and matching sell and buy orders. Ontology matching is a solution to the semantic heterogeneity problem e.g., Pellet atop blockchain, schema matching/mapping, etc. In this topic, ontology matching is a requirement for finding compatible offer and demand (buy and sell orders) in semantic-based marketplaces. To guarantee the fairness of the transactions in the marketplace, the matching process should be fair to every party, e.g. preventing exclusion, censorship, price manipulation and fraud. The goal of this topic is to design and implement prototypes that will provide ontologies management and setup for decentralized semantic matching of demand and supply for different use case scenarios (e.g., apartments, land, cars, etc.), even across chains.</p>
Challenges	<p>The challenge is to develop a component that offers services similar to existing virtual marketplaces but for arbitrary goods/services, and</p>

	<p>ensuring the highest level of trust and fairness. The marketplace logic (including the propagation and the matching of market orders) must thus be as decentralized as possible, while offering high performance and low response time.</p> <p>The solution should leverage ONTOCHAIN services introduced in Open Call 1 for increasing trust between users (e.g., identity, reputation) and be open to all of the present and future ONTOCHAIN stakeholders. In addition to decentralization, particular care must be given to avoiding any censorship, market manipulation (e.g., by hiding, erasing or forging orders or ontological descriptions) and spam attacks. The semantic matching component must guarantee that every offer has been considered, that the returned service/good is always the most appropriate for the user, and that it satisfies every expressed requirement.</p>
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It should address as much as possible the challenges and the following requirements:</p> <ul style="list-style-type: none"> • Support different ambitious use-case scenarios (e.g., apartment rental, car sale, freelancing) based on metadata and semantic constraints (e.g., apartment size and location, etc.). • Rely on existing ONTOCHAIN components to provide new services like ontology description, evaluation, integration, etc. • Find the best trade-off for decentralized ontology matching for achieving higher throughput in large ontologies while maximizing trust and fairness. • Provide incorporation of Property Graphs (PGs)/ Labelled Property Graphs (LPGs) as an alternative data model for using semantics, this should include (but not limited to) the mechanism for encoding Ontologies using LPG data model, mechanism for reference to OWL Ontologies and the mechanism for reasoning over LPGs.
<p>Context</p>	<p>Proposals should position the proposed solution on a landscape of existing services and platforms. Specific context for the action is provided by the following services, however, other contexts may apply: S- Match: an algorithm and an implementation of semantic matching. This algorithm is therefore that of developing a platform for semantic matching, namely a highly modular system where single components can be plugged, unplugged or suitably customized In this approach the strongest semantic relations between concepts of nodes.</p> <ul style="list-style-type: none"> • OAEI: The main goal of OAEI is to support the comparison of the systems and algorithms on the same basis and to allow anyone to draw conclusions about the best matching strategies. • COMA: is a schema and ontology matching tool. In their last version they enable workflow management and additional features like ontology merging. Furthermore, it offers a comprehensive

	<p>infrastructure to solve large real-world match problems. The graphical interface offers a variety of interactions, allowing the user to influence the match process in many ways.</p>
Expected outcomes	<p>The expected outcomes are an API, a SDK and a GUI for interacting with the marketplace that implement the following functions:</p> <ul style="list-style-type: none"> • Uploading ontological descriptions of goods and services. • Publishing and propagation orders. • Matching ontological market orders. • Sealing deals permanently in a smart contract on the underlying blockchain. <p>All the functions must be accessible to end users and applications through all three interfaces</p> <p>This open-source software outcome can be used mainly as a design of a potential front-end to the ONTOCHAIN infrastructure and services. It can be used to showcase the potential of the new trustworthy knowledge management services provided by ONTOCHAIN. Specific use cases are expected to be as follows: Ontology engineering, Information integration, Linked data, Peer-to-peer information sharing, Web service composition, Autonomous communication systems, Navigation and query answering on the web Mapping between schema elements. Semantic relations by analyzing the meaning, Resource discovery, Data integration and migration, Query translation, Agent communication, Schema and ontology merging, Representation of graphs and text data, AI (Natural Language Processing), Computer Vision.</p>

TOPIC A3

Title	<ul style="list-style-type: none"> • Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services
Definition	<p>The intention of ONTOCHAIN is to produce a portfolio of software results that can be used to exemplify key technologies and solutions for trustworthy, decentralised knowledge management.</p>
Challenges	<p>The ONTOCHAIN project has witnessed several approaches to building an energy efficient, elastic and sustainable infrastructure that would be particularly suited to the ONTOCHAIN services and applications.</p>

<p>Requirements</p>	<p>The key requirements here are to build an infrastructure consisting of a minimum of 3 blockchain nodes that will be used to host the ONTOCHAIN services and applications.</p> <p>Calculations of energy-efficiency, sustainability, cost-benefit and other aspects will have to be performed.</p> <p>Security analysis of the chosen configuration and consensus protocols is also necessary to be performed.</p> <p>Results of this work are also scalability and other stress tests to highlight key Quality of Service parameters of the newly designed network.</p>
<p>Context</p>	<p>The ONTOCHAIN project currently features 30 projects and around 14 new projects and applications are supposed to enter the project in the 3rd project year.</p>
<p>Expected outcomes</p>	<p>Energy efficient and scalable, appropriately configured ONTOCHAIN Network (running infrastructure) with a minimum of 3 nodes that fits the needs of the ONTOCHAIN software ecosystem and its applications. Energy-efficiency and Quality of Service testing results that are appropriate for the needs of the project. A Memorandum of Understanding allowing the participation of various entities in the ecosystem.</p>

1.3.2 Objective B-Provision of ONTOCHAIN applications that cover real need in terms of trustworthy data/services exchange and trustworthy content handling for various vertical domains/vital sectors of the European economy

TOPIC B1

<p>Title</p>	<p>Semantic Digital Logbooks for Companies, Buildings, Cars or similar</p>
<p>Definition</p>	<p>In modern society a variety of products and services are centred on specific valuable entities, such as companies, buildings or cars. The trustworthiness of products and services that are involved in the process of interacting with such entities is of immense importance. Moreover, the immutability of the data, and the use of various application-level proofs can greatly contribute to knowledge sharing along the overall lifecycle of these entities.</p>

<p>Challenges</p>	<p>The challenges here are to propose and implement a solution that is capable of integrating information from various actors, being product and service providers, along with their necessary credentials. The use of such information in the overall process can greatly enhance the assessment of such entities (e.g. companies from the viewpoint of their credibility on the market, the energy-efficiency and sustainability of buildings, or the overall car markets, starting from their production, usage, servicing and 2nd hand markets trading). Using various credentials in the overall process can greatly enhance the trustworthiness of these entities and the interactions on the real-world market.</p>
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will provide a full-fledged solution that covers a specific part (e.g. usage) of the lifecycle of such entities. E.g. companies with blockchain-based digital identities could accumulate various certificates and credentials, so that their information can be made transparent in market interactions (e.g. concept of Self-Sovereign Identity of companies). Proposers should go well-beyond existing developments such as those of the European Blockchain Services Infrastructure (and their associated use cases).</p>
<p>Expected outcomes</p>	<p>An attractive Technologies Readiness Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected.</p>

TOPIC B2

<p>Title</p>	<p>Decentralised fact checking and data credibility for social content</p>
<p>Definition</p>	<p>Social media platforms provide citizens with virtual spaces where they can share information, express themselves and organize social and democratic actions. However, the control of the largest platforms by a handful of companies creates an imbalance of power that is harmful to users: unverified/fake information, censorship, violence/bullying and scams are regulated behind closed doors, with little to no possible appeal.</p> <p>In addition, all of the value created by social media platforms is kept by their providers, which creates an ecosystem in which there is little to no reward for good contributions, and where the exploitation of private information is the norm. Creating fair and sustainable social networks and social media platforms thus requires novel software</p>

	<p>tools and novel business models. DLTs and Decentralized Autonomous Organizations can support new governance structures for social platforms by placing information verification, moderation and censorship through a democratic process. Cryptographic tokens can help create a virtuous business model which rewards users and contributors fairly and discourages abuses.</p>
Challenges	<p>The challenges here are to propose and implement a solution that:</p> <ul style="list-style-type: none"> • is both technically strong and appealing to users, in order to compete with mainstream social media platforms, • demonstrates good potential for business without compromising with social welfare and decentralization of power, • supports some form of identity verification without breaking anonymity, which is paramount to true free speech.
Requirements	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> • Oracle system (e.g. Dart, Ados), • Reputation mechanisms (e.g. REPUTABLE), • Identity management and verifiable credentials (e.g. OntoSSIVault, HiBi), • Decentralised social management tool (e.g. CopyrightLY). • Data provenance (e.g., PS-SDA, ONTOROPA).
Expected outcomes	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. It can be an entirely new decentralized social media platform or a new tool which can be used on top of existing platforms (e.g. a decentralized fact checking plugin for Twitter).</p> <p>Here are some potential examples: Copyright management on social media platforms, Platform neutrality, DAO for collective intelligence and democracy, Collective content verification and fact checking, Trust networks, Privacy-preserving account verification</p>

TOPIC B3

Title	Decentralized Online Semantic Social Networks
Definition	Distrust in the Internet is causing people to change the way they behave online, for example by disclosing less personal information.

	<p>Users also express an increasing level of distrust of social media platforms. A decentralized semantic social network concerns an application where social profiles are stored in a decentralized manner, storage is secure and privacy-aware, and semantic content is highly available. The idea is that users have similar Quality of Experience (QoE) with centralized social network solutions, but even better/more services than those available therein. e.g., a trusted services exchange environment can be activated on top of this decentralized social network. The business viability of the solution has to be clearly described.</p>
<p>Challenges</p>	<p>The challenges here are to propose and implement a solution that:</p> <ul style="list-style-type: none"> • Is both technically strong and appealing to users, in order to compete with mainstream social network platforms, • Maintains high content availability and discoverability, • Provides high data privacy guarantees for the end users, • Does not involve any centralised governance, • Enables trustworthy social interactions online.
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> • Decentralised reputation management (REPUTABLE), • Decentralised metadata management (GRAPHCHAIN, ONTOSPACE, OriginTrail DKG), • Data provenance (e.g., PS-SDA, ONTOROPA), • Data ontologies (POC4COMMERCE), • Data ownership watermarking approaches (DW-marking), • Decentralised identity management (OntoSSIVault), • Decentralised data oracles (DART, ADOS, DESMO-LD).
<p>Expected outcomes</p>	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. It should be an entirely new decentralised online social network platform, alternative and competitive to existing ones.</p>

TOPIC B4

Title	Semantic energy data management
<p>Definition</p>	<p>Resources conservation, climate protection and cost savings are today the cornerstone of climate protection efforts, while allowing users to have permanent access to the energy they need. Renewable energy resources are currently being deployed on a large scale to meet the requirements of increased energy demand, mitigate the environmental pollutants, and achieve socio-economic benefits for sustainable development. In this context, efficient semantic energy data management is thus crucial. It includes the use of semantic data in the planning and operation of energy production and energy consumption units as well as energy distribution and storage. The microgrid concept that is a self-sustained system consisting of distributed energy resources becomes more and more popular and applications in microgrids are considered more and more common having the goal to minimise the cost of energy taken from the final customer. A number of actors are so enabled to be procurers of green energy themselves, putting into the grid the extra productions from renewable sources that they don't use. If relevant, microgrid applications nonetheless need a semantic energy data management system for an optimal use of these distributed energy resources in intelligent, secure, reliable, and coordinated ways. This management system to operate in a trustworthy manner should incorporate features like Identity management, grid control, data interoperability, service accounting. Additional features could be also the control over the sustainability of the energy itself, checking the source of provenance (renewable vs. fossil ones).</p>
<p>Challenges</p>	<p>The challenges here are to proposed and implement a solution for distributed semantic energy data management that :</p> <ul style="list-style-type: none"> • Can be secure, trustworthy and reliable with what concern energy production versus energy consumption, and overall energy efficiency management actions, • Enable the rewarding of final customer when contributing to the efficiency of the system and trade surplus of resources with other members of the grid, • Can control over the sustainability of the energy itself, checking the source of provenance (renewable vs. fossil ones) as well as that can control greenhouse gas emissions while unlocking compensatory mechanisms for inappropriate behaviours.
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p>

	<ul style="list-style-type: none"> • Semantic distributed oracles (e.g. projects ADOS, DESMO), • Reputation mechanisms (e.g REPUTABLE), entity management and verifiable credentials (e.g OntoSSIVault, HiBi), • Market support, energy transaction support (e.g. POC4COMMERCE), • Tokenomics (e.g. NFTSwap, PRINGO).
Expected outcomes	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected.</p> <p>The proposed application should be oriented around e.g. smart grids, microgrids, energy trading, green energy management, energy waste reduction.</p>

TOPIC B5

Title	Smart City Applications relying on Trustworthy Semantic Metadata
Definition	<p>Smart cities are places where traditional networks and services are made more efficient with the use of digital solutions for the benefit of its inhabitants and business. They go beyond the use of digital technologies for better resource use and less emissions. It means smarter urban transport networks, upgraded water supply and waste disposal facilities and more efficient ways to light and heat buildings. It also means a more interactive and responsive city administration, safer public spaces and meeting the needs of an ageing population. In this landscape, blockchain applications have the power to coordinate, integrate and control different city services with transparency, efficiency and privacy thanks to their features for identity management, service accounting, system control and analysis, payment system, privacy management, tokenomics.</p>
Challenges	<p>The challenges here are to proposed and implement a solution for smart cities semantic data management that can for example:</p> <ul style="list-style-type: none"> • Control and act for the reduction of greenhouse emissions in the city to lessen the climate change, or • Facilitate more efficient use of resources and the circular economy in the city, or • Improve traffic safety and overall mobility services in the city, from the city and to the city (cross cities/countries care sharing or other transport means sharing), or • Improve public and the waste collection service, or

	<ul style="list-style-type: none"> Enhance participation and guarantee the security, reliability, transparency and anonymity of public consultations, such as elections, surveys, referendums, or etc.
Requirements	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> Semantic distributed oracles (e.g. projects ADOS, DESMO), Reputation mechanisms (e.g. REPUTABLE), Identity management and verifiable credentials (e.g. OntoSSIVault, HiBi), Market support, (e.g. POC4COMMERCE), Tokenomics (e.g. NFTSwap, PRINGO),
Expected outcomes	<p>Urban areas drive economic development and deliver many public services, such as education, healthcare and transportation; but they are also associated with environmental degradation, congestion, economic and social exclusion. In this context, an attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. The proposed application is expected to contribute to the resource efficiency or the energy efficiency or the green mobility or the mobility security or the control and reduction of air pollution or the overcrowding limitation (e.g. adaptive traffic control system) or participatory urban planning etc.</p>

TOPIC B6

Title	Automotive, e.g., electric vehicle charging, road side management, car insurance, communication interoperability
Definition	<p>The automotive industry has always been at the forefront of technical innovation, with automakers constantly looking for new ways to utilize cutting-edge technologies to their advantage. And blockchain has the potential to bring significant benefits to this industry. Electric and autonomous vehicles are two emerging trends promising to transform the automotive industry and transportation. In combination with other technologies such as the Internet-of-Things, machine learning and big data, the blockchain in automotive can enable development of:</p> <ul style="list-style-type: none"> Solutions that help owners of electric cars to more easily charge their vehicles;

	<ul style="list-style-type: none"> ● Blockchain mechanism for hiring smart autonomous vehicles ● Efficient ways for autonomous vehicles to collect, store, organize and share data, which, in turn, will help them learn how to better navigate any environment; ● platforms for tracking and managing global or localized fleets of self-driving vehicles and more. <p>In general, a part from the specific use case of EV and autonomous vehicles, the blockchain technology can also help develop other solutions for this sector as :</p> <ul style="list-style-type: none"> ● for ensuring trustworthy, legal and ethical sourcing of raw materials to ensure that every step of the supply chain is documented and the resulting documentation is securely stored, forgery-proof and readily available for inspection. ● Digital passports for vehicles for ensuring trustworthy, legal resale of a used car or sharing relevant information about a vehicle with third parties, for example, insurance companies that need to avoid frauds. ● New type of ride/car-sharing services that run on a peer-to-peer network without the need for a central authority e.g management of car sharing among the members of an organization or a community.
<p style="text-align: center;">Challenges</p>	<p>The automotive sector brings together different stakeholders that have different goals and interests. For example, for EV, these include EV AGGregator (EVAGG), which is needed to aggregate the batteries of EVs and represent their users in the energy market (e.g., EVAGG will operate as a middleman between users and grid operators) and others such as Transmission System Operator (TSO), Distribution Network Operator (DNO), Data Communications Company (DCC) and suppliers. Some of these stakeholders may take actions that are incompatible with the interest of the other entities in order to maximize their own profits.</p> <p>Moreover, despite some benefits the new era of the automotive industry can also have drawbacks for example: allowing individuals to charge their EV in an unregulated manner might affect the grid. The peak load may dramatically increase, requiring more generating capacity as well as transmission and distribution network modification. The gap between base and peak load might become larger, resulting in inefficient use of available generating capacity. Moreover, balancing the grid (e.g., matching supply with the demand), will be more challenging, requiring more spinning reserve. The proposed solution will have to tackle these challenges by for e.g.</p> <ul style="list-style-type: none"> ● Embedding mechanisms that can prevent or minimize the chances of any unfair play by any of the stakeholders, as well as provide proper security against any threats or attacks made by third parties. ● Rethinking some infrastructures to reach the full potential of EV and autonomous vehicles

<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> • Decentralized Oracle Network (e.g. Dart, Ados, Desmo-LD) • Reputation mechanisms (e.g. REPUTABLE) • Identity management and verifiable credentials (e.g. OntoSSIVault, HiBi) • Multi Factor Self Sovereign Authentication (e.g. MFSSIA). <p>It should support different ambitious use-case scenarios.</p>
<p>Expected outcomes</p>	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. Examples are many: EV charging system enabling grid balance, vehicle tracking system, decentralized ride hailing, convenient city transportation, decentralized manned deliveries, autonomous drone deliveries, autonomous carriers, autonomous ride/care sharing, using Blockchain's decentralized ledger driverless cars to have access to key traffic data almost instantly and more precisely, using Blockchain Smart Contracts to simplify many aspects of driving such as paying for car insurance, repairs, and tolls, offering Blockchain solution that allows autonomous cars to connect to their surrounding environment, solution that provides better vehicle tracking and communication to improve overall connectivity, improving transactions that happen on a regular basis between vehicles and the infrastructure around them, using token (e.g., ONTOCHAIN token) to pay for data (weather forecasts, gas prices nearby, congestion data and so on) that requires from other cars, vehicles might potentially earn tokens by simply giving or selling their data to advertising or manufacturers. Solution should provide like this strategy within Blockchain technology to establish a V2V closed ecosystem that encourages and rewards participants simultaneously. Vehicle to infrastructure (V2I), a Blockchain based solution can significantly improve many aspects of driving such as car maintenance, tolls, insurance. Drivers might automate their insurance to be paid based on usage rather than paying yearly insurance rates that can change due to unknown variables. Ride-sharing is another intriguing use of blockchain-based microservices for vehicles.</p>

TOPIC B7

Title	Distribution Logistics / Supply Chains Using Trustworthy Semantic Data
<p>Definition</p>	<p>Distribution logistics, also known as sales logistics, deals with the planning, realisation and control of the movement of goods. It also includes the inventory stock management, the production planning forecasting and the cost control of the supply chain. Depending on the product, the supply chain can include many phases, multiple geographic locations, several accounts and payments, several individuals, entities, and means of transport. Blockchain has many potential advantages in this industry. It enables companies to increase efficiency (e.g. process automation, reduced paperwork, etc.), transparency and traceability, while also making supply chains more secure as the origin and authenticity of products is known, proven and shared.</p> <p>Moreover, applications of distribution logistics can involve different kinds of actors, in particular those typically working in any part of the e-commerce supply chain. Cost controls over the supply chain, certification of the provenance of goods, price control to the final customers are building blocks suitable for a number of business cases needed by e-commerce portals, good producers (as local food) anche distribution logistic transport actors. A relevant issue that is possible to face is taking into account the pollution produced by the supply chain itself in order to minimize the environmental impact and maximize the green sustainability of the supply chain.</p> <p>Overall, it involves mechanisms for data accountability, data interoperability, data anonymization, data privacy control, data orchestration, permission management and tokenomics.</p>
<p>Challenges</p>	<p>The challenges here are to proposed and implement a solution for distribution logistics that can for example help:</p> <ul style="list-style-type: none"> • Optimising the delivery process and reducing delays • Tracing the products from their source, throughout various phases and processes of the supply chain, from the physical condition of the consignment at any given moment, through various variations of the goods (e.g., temperature deviations) and to support the decision making of logistics operators, • Reducing transportation costs, • Improving business processes, • Reducing stock cost and optimising service level agreement.
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will</p>

	<p>have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> ● Semantic distributed oracles (e.g., ADOS, DESMO), ● Ontologies (e.g., POC4COMMERCE), ● Reputation mechanisms (e.g., REPUTABLE), ● Tokenomics (e.g., NFTSwap, PRINGO).
Expected outcomes	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. Examples are the following: supply chain management, e.g. spare parts distribution, e.g. in consumer electronics, car spare part management, e-commerce, food delivery, vehicle routing optimization, health products delivery, etc.</p>

TOPIC B8

Title	Data/Digital content /Multimedia marketplace, including social media
Definition	<p>Data marketplaces centralized, decentralized or federated are currently very popular for exchanging private/proprietary data in a secure, privacy-aware manner. Dealing with data identification, data ownership, data provenance, data handling in compliance to GDPR, privacy-aware data processing, data valuation, data value sharing among data owners comprise issues to be dealt with in these marketplaces. Multimedia/digital content exchange could also be of relevance in these marketplaces with similar issues, e.g., video streaming exchange.</p>
Challenges	<p>The challenges here are to proposed and implement a solution that demonstrate a good potential for multimedia providers and users (fair and self-sustaining business model, ease of retrieval information of interest also by the proper use of semantics, more in general easy to use and attractive service, properly addressing the long tail of contents).</p>
Requirements	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> ● Ontologies and suitable use of semantics (e.g POC4COMMERCE), ● Copyright management (e.g Copyrightly), ● Data provenance (e.g., PS-SDA, ONTOROPA),

	<ul style="list-style-type: none"> • Data ownership/watermarking (e.g., DW-marking) • Decentralised reputation management (e.g., REPUTABLE), • Decentralised identities (e.g., ONTOSSIVault, HIBI, MFSSIA), • Data price determination mechanisms (e.g., NFTSwap), • Decentralised knowledge data indexing (e.g. OriginTrail DKG), • Privacy-aware data processing (e.g., KnowledgeX).
Expected outcomes	An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. Examples are the following: Streaming media services, copyright management, including social media, un-traceability of user opinion in social media, neutrality, and anonymity.

TOPIC B9

Title	Semantics-based DAO
Definition	<p>DAO is an organization that is represented by rules encoded as a computer program, is transparent, managed by its members, and is not affected by a central government. The financial transaction and program rules of a DAO can be maintained on a Semantic Blockchain. We can think of DAOs as internet-native business model which is collectively owned and controlled by its members. This includes the use of high-quality semantic data (on-chain or off-chain) concerning all aspects of the DAO. They have built-in treasuries to which no one can have access without the group's permission. Proposals and voting are used to make decisions, ensuring that everyone in the company gets a say. Starting an organization with someone that involves funding and money requires a lot of trust. However, it's hard to trust someone you've only ever interacted with on the internet. With DAOs you don't need to trust anyone else in the group, just the DAO's code, which is 100% transparent and verifiable by anyone.</p>
Challenges	<p>The adoption of Semantics-based DAOs is still being debated, raising difficult governance issues that might limit their growth and development. DAOs are not formally recognized and do not exactly fit into established forms of business organizations, making interaction with regular commercial entities problematic and putting members at risk. In certain instances, interests in DAOs may be difficult to classify, raising regulatory concerns when it comes to securities laws. The risks of distributed governance: DOAs rely on Blockchain Smart Contracts (SCs), however, SCs may improve</p>

	<p>operational efficiency, but they don't remove the social and political aspects of governance. Humans do not have an infinite capacity for information and exhibit well-understood bounds to rationality, limiting the capacity of DAO-members to engage fully in an organization's governance structure. Gathering all of the information needed to make an informed decision may be too time-consuming and difficult for others, discouraging participation. Questions thus emerge as to whether DAOs will operate with the same degree of efficiency, or even comparable efficiency, as more hierarchical organizations. Another challenge is that, If the underlying software structuring the DAO contains a bug, mistake, or other vulnerability, DAO members are presented with a limited set of options. Limitation of Liability: Besides from governance issues, DAOs lack official legal registration, thereby exposing DAO members to the organization's liabilities and duties. DAOs are also outside of regular systems, making it difficult for them to deal with more traditional legal entities. If characterized as a general partnership, DAOs may struggle to attract members, especially those with significant assets. Large businesses, investors and other regulated entities may hesitate to engage in or otherwise support a DAO for fear that membership would put other assets at risk. Security and vulnerabilities are other challenges e.g. the famous attack that happened shortly after the lunch of TheDAO in June 2016. An unknown hacker was able to drain away 3.6 million ETH (50 \$ million at the time), approximately a third of the 11.5 million ETH that was devoted to TheDAO.</p>
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> • Decentralised Oracle Network (e.g Dart, Ados, Desmo-LD) • Reputation mechanisms (e.g REPUTABLE) • Identity management and verifiable credentials (e.g OntoSSIVault, HiBi) • Multi Factor Self Sovereign Authentication (e.g MFSSIA). <p>It will have to support different ambitious use-case scenarios.</p>
<p>Expected outcomes</p>	<p>An open source software application from different domains (e.g., gaming crypto exchange, legal engineering, art, Defi products, governance of dapps, investment, worker collection, social media, asset management, insurance, trust funds, ownership, media, entertainment, politics) is expected that is based on the DAO philosophy and existing well-known blockchain networks. The application must target a wide range of users and offer a low cost service for the participants. The rules on how the DAO membership of the application will be developed must be defined in a clear way. The DAO based application must offer a safe and optimized frame.</p>

	<p>The software must implement modern security protocols and standards and provide the highest level of security to the clients.</p> <p>Some examples are as follows: investment, charity, fundraising, borrowing, buying NFTs, donations acceptance, freelancer network etc.</p>
--	---

TOPIC B10

Title	Decentralised public services & common goods
Definition	<p>This topic aims to produce tools and services for supporting trusted information exchange at the local level, in communities and small organizations. Many local initiatives spawn at the local level to build and support social cohesion: local currencies support sustainable businesses; online platforms connect people who need help with school support, finding a job, lending tools, avoiding food waste and helping refugees. DLTs and Web3 applications can bring many tools that will help build stronger local organizations: Decentralized Autonomous Organizations (DAO) can support democratic debate and transparent voting in local decisions; local crypto-currencies can support local businesses, fund local projects, track the way public money is being used and create incentives for local good; trusted information sharing, decentralized reputation, Web3 social media platforms can help organized local events and make local data open and traceable.</p>
Challenges	<p>The challenges here are to propose and implement a solution that makes services accessible by citizens of all backgrounds and age as well as to convince users of the value of Web3 alternatives compared to centralized ones.</p>
Requirements	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> • Reputation mechanisms (e.g. REPUTABLE), • Identity management and verifiable credentials (e.g. OntoSSIVault, HiBi, MFSSIA), • Proof of location (e.g., GEONTOLOGY), • Oracles systems (e.g., ADOS, DESMO-LD).

<p>Expected outcomes</p>	<p>An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. The output should be new applications deployed publicly and accessible to European citizens, administrations and organizations. Examples are as follows:</p> <ul style="list-style-type: none"> ● Management system for associations (accountability, voting, data sharing, communication.) ● Local currencies tied to incentives mechanisms for social good (e.g. supporting local businesses, sustainable agriculture...) ● Event system with ticketing, Proof-of-Attendance tokens, etc.
---------------------------------	--

TOPIC B11

<p>Title</p>	<p>Remote presence/working and metaverse</p>
<p>Definition</p>	<p>The COVID-19 crisis has shown how important distance and innovative learning is for society, our children, their parents and their teachers, maintaining social and educational links under challenging circumstances. Emerging technologies such as virtual reality, eXtended reality or immersive environments provide numerous opportunities for personalised, innovative, efficient and inclusive learning, for learners of all ages, gender and condition. In Xverse applications, people may need to interact in virtual environments with third-party real-world data or avatars, which may be trustworthy or not. For example, remote engineers working on a disaster site with data from the field of interest and interacting with remote/on-site colleagues or remote/on-site workers. Applications that enable metaverse, Xverse interactions and remote working in a trustworthy, privacy-aware and transparent manner are needed.</p>
<p>Challenges</p>	<p>The challenges here turn around trustworthy identities, trustworthy data, trustworthy interactions and accountability in augmented/virtual reality applications, in remote presence/working and in the metaverse.</p>
<p>Requirements</p>	<p>The proposed solution will have to use standard technology for full stack development and the results will have to be open source. It will have to use mechanisms that are already part of ONTOCHAIN services such as :</p> <ul style="list-style-type: none"> ● Value exchange by means of using various tokens; ● Ability to find and use help of different experts directly in the working process (e.g. software development); ● The use of blockchain-based semantic metadata to generate and exchange various proofs in the working process;

	<ul style="list-style-type: none"> Applications connecting trustworthy reality with AR/VR environments.
Expected outcomes	An attractive Level 7 solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. The output should be a semantic-blockchain enabled working environment involving AR/VR and similar notions of the metaverse.

OPEN TOPIC

The B1-B11 examples above are only indicative. Applicants can submit a proposal under any different topics, as long as it serves the overall ONTOCHAIN vision and objectives and fits within the formula Semantic Web + Blockchain. It should use as much as possible existing concepts and technologies of ONTOCHAIN and fit within its vision and objectives. It can be for example in relation with decentralised market places, DeFi and for the healthcare, tourism, agriculture sectors etc. In any case, an attractive Level 7 open source solution, tested and evaluated by an adequate pool of potential users, with a self-sustaining business model to be exploited after the end of the project is expected. The proposed solution will have to use standard technology for full stack development, mechanisms that are already part of ONTOCHAIN services.

1.3.3 Deliverables

Whatever the topic, the projects funded by the ONTOCHAIN consortium must deliver four deliverables during their participation process in ONTOCHAIN. They are defined below:

- **D1:** SoA overview, use case analysis and preliminary technical specification of the solution.
- **D2:** Detailed technical specification of the solution, software implementation work plan, and demo scenarios, preliminary business plan..
- **D3:** Implementation, deployment in appropriate ONTOCHAIN platform, testing, demonstration and validation.
- **D4:** Modularised software components ready for distribution, full documentation for developers/users, final business plan.

2 MODALITIES FOR APPLICATION

2.1 WHAT TYPES OF PROJECTS WILL BE ELIGIBLE?

Applications must be based on the ONTOCHAIN proposal description template (Annex 3) and must clearly fit within one of the two objectives A or B described in section 1.3.

Note that ONTOCHAIN Open Call 3 includes the topics described above, but is not limited to them, as explained in Section 1.2, and repeated here for convenience. Especially under Objective B, a proposal under a different topic will also be considered as long as it serves the overall ONTOCHAIN vision and objectives (see Section 1).

Furthermore, Applicants should demonstrate their long-term commitment to the ONTOCHAIN research and innovation agenda. Selected Applicants will work to demonstrate that the proposed solution progresses from the beginning of the project, reaching a higher maturity level and take-up by the end of the action. Thus, all the projects must evidence substantial progress with a particular focus on the interoperability and sustainability of the outcomes according to the ONTOCHAIN framework.

Thus, following the spirit of the H2020 Call ICT-54 Blockchain for the Next Generation Internet, the ONTOCHAIN Research and Innovation Action encourages open-source software and open hardware design, open access to data, standardisation activities, access to testing and operational infrastructure as well as an IPR regime ensuring lasting impact and reusability of results. If the expected results of the proposed project cannot be released as open source, it should be duly justified in the application document.

At the eligibility evaluation stage, if a proposal is considered to better fit a different Objective or/and topic than the one selected by the applicant, this latest will be contacted by the ONTOCHAIN Consortium in order to commonly agree to move the proposal to the relevant topic for evaluation.

2.2 WHAT HAPPENS AFTER THE PROPOSALS ARE SUBMITTED?

Immediately after the submission deadline (25 July 2022, 17:00 CEST) is over, the evaluation process begins (as described in detail in Section 4 of this Guide).

Experts will evaluate proposals and score them adequately according to the quality of the content presented.

The goal of the process is to select up to 14 high value proposals with the procedure defined in chapter 4. Selected applicants will be invited to join the ONTOCHAIN Research and Innovation Action. The exact number of selected projects will be subject to the quality of the proposals and the funding available.

3 ELIGIBILITY CRITERIA

All Applicants will have to abide by all general requirements described in this section to be considered eligible for ONTOCHAIN. Therefore, Applicants are requested to read the following section carefully.

3.1 TYPES OF APPLICANTS

The target Applicants of this call are Internet technologists, researchers, developers and innovators. Applicants can apply as individuals or linked to a legal entity. Hence, the participation is possible in several ways:

- **Team of natural person(s):**

Team of individuals, all established in any eligible country (see section 3.2). This does not consider the country of origin but the residence permit.

- **Legal entity(ies):**

One or more entities (consortium) established in an eligible country (see section 3.2);

It can be: Universities, research centres, NGOs, foundations, micro, small and medium-sized enterprises (see definition of SME according to the Commission Recommendation 2003/361/EC), large enterprises working on Internet or/and other related technologies are eligible.

- **Any combination of the above.**

In addition, the following condition apply:

- The participating organisations should not have been declared bankrupt or have initiated bankruptcy procedures.
- The organisations or individuals applying should not have convictions for fraudulent behaviour, other financial irregularities, and unethical or illegal business practices.

3.2 ELIGIBLE COUNTRIES

Only Applicants legally established/resident in any of the following countries (hereafter collectively identified as the “Eligible Countries”) are eligible:

- The Member States (MS) of the European Union (EU), including their outermost regions;

- The Overseas Countries and Territories (OCT) linked to the Member States¹;
- H2020 associated countries (those which signed an agreement with the Union as identified in Article 7 of the Horizon 2020 Regulation): according to the updated list published by the EC²;
- The UK Applicants are eligible under the conditions set by the EC for H2020 participation and as long as they comply with the same eligibility rules as the other Applicants.

3.3 LANGUAGE

English is the official language for ONTOCHAIN open calls. Submissions done in any other language will be disregarded and not evaluated.

English is also the only official language during the whole execution of the ONTOCHAIN programme. This means any requested submission of deliverables must be done in English in order to be eligible.

3.4 PROPOSAL SUBMISSION

Proposals must be submitted electronically, using the ONTOCHAIN Online Submission Service accessible via <https://www.f6s.com/ontochain-open-call-3/apply> Proposals submitted by any other means, will not be evaluated.

Only the documentation included in the application will be considered by evaluators. It will be composed by a form with administrative questions to be completed directly in the platform and the proposal description attached in PDF format. To be eligible, Applicants must strictly follow the proposal template provided in the annexes as well as the page limitation.

The information provided should be actual, true and complete and should allow the assessment of the proposal.

The preparation and submission of the proposal and other actions that follow this procedure (such as withdrawal) fall under the final responsibility of the Applicant.

3.4.1 Multiple submissions

Given the fact that this call is a competitive one, and one Applicant should focus on only one specific topic the following apply:

- Only one proposal per **Applicant** should be submitted to this call, and only one proposal per **Applicant** will be evaluated. In the event of multiple submissions by an

¹ Entities from Overseas Countries and Territories (OCT) are eligible for funding under the same conditions as entities from the Member States to which the OCT in question is linked

² http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/hi/3cpart/h2020-hi-list-ac_en.pdf

applicant, only the last one received (timestamp of the system) will enter into the evaluation process. Any other submitted proposals by the same Applicant involving the same Applicant will be declared non-eligible and will not be evaluated in any case.

- Only one proposal per **Individual** should be submitted to this call whether he/she applies within as a Team of natural persons or as part as part of a consortium member. If an individual is taking part in several teams/consortiums, the members of the other teams/consortium will be informed about the participation of an individual in multiple teams/consortiums. Then, only the last proposal received (timestamp of the system) including the individual will enter into the evaluation process. Any other submitted proposals involving this Individual will be declared non-eligible and will not be evaluated in any case.

Note that the regular functioning of the F6S platform limits to one application submission per F6S user in each call. If an F6S user wishes to submit more than one application, **for example on behalf of different Applicants**, the F6S user should request support from the F6S support team (support@f6s.com) at least 10 days prior to the open call deadline.

3.4.2 Participation to the 3 ONTOCHAIN Calls and funding rules

Applicants can apply, participate and benefit from the three ONTOCHAIN open Calls but the maximum funding a single beneficiary can receive from the whole ONTOCHAIN project is limited to € 200 000.

3.4.3 Complaint due to a technical error of the ONTOCHAIN Online Submission Service

If you experience any problem with the application submission system prior the deadline of the open call, you should reach F6S by e-mail through support@f6s.com, cc'ing the ONTOCHAIN Team (ontochain@ngi.eu), and explain your situation.

If you believe that the submission of your proposal was not entirely successful due to a technical error on the side of the ONTOCHAIN Online Submission Service, you may lodge a complaint by email through support@f6s.com cc'ing the ONTOCHAIN Team (ontochain@ngi.eu) and explain your situation. For the complaint to be admissible it must be filed within 3 calendar days following the day of the call closure. You will receive an acknowledgement of receipt, the same or next working day.

What else to do? You should secure a PDF version of all the documents of your proposal holding a timestamp (file attributes listing the date and time of creation and last modification) that is prior to the call deadline, as well as any proof of the alleged failure (e.g. screen shots). Later in the procedure you may be requested by the ONTOCHAIN IT Helpdesk to provide these items.

For your complaint to be upheld, the IT audit trail (application log files and access log files of ONTOCHAIN Online Submission Service) must show that there was indeed a

technical problem at the ONTOCHAIN consortium side which prevented you from submitting your proposal using the electronic submission system.

Applicants will be notified about the outcome of their complaint within the time indicated in the acknowledgment of receipt. If a complaint is upheld, the secured files (provided to the IT helpdesk) for which the investigation has demonstrated that technical problems at the ONTOCHAIN consortium side prevented submission will be used as a reference for accepting the proposal for evaluation.

3.5 CONFIDENTIALITY AND DEADLINE

Any information regarding the proposal will be treated in a strictly confidential manner.

Only proposals submitted before the deadline will be accepted. After the call closure no additions or changes to received proposals will be taken into account.

Proposals must be submitted before the 25th of July 2022, 17:00 CEST. To avoid missing the deadline, you are encouraged to submit your proposal as soon as possible.

3.6 CONFLICT OF INTEREST

Applicants (even individual members of applicants) shall not have any actual or/and potential conflict of interest with the ONTOCHAIN selection process and during the whole programme. All cases of conflict of interest will be assessed case by case. In particular, applicants (even individual members of applicants) cannot be ONTOCHAIN Consortium partners or affiliated entities nor their employees or co-operators under a contractual agreement, nor a member of the ONTOCHAIN Advisory Board.

If a conflict of interest is discovered and confirmed at the time of the evaluation process, the proposal will be considered as non-eligible and will not be evaluated.

3.7 OTHER

Each Applicant must confirm:

- It is not under liquidation or is not an enterprise under difficulty according to the Commission Regulation No 651/2014, art. 2.18,
- Its project is based on the original works and going forward any foreseen developments are free from third party rights, or they are clearly stated,
- It does not receive extra funding for the development of its proposal from any other public or private entity.

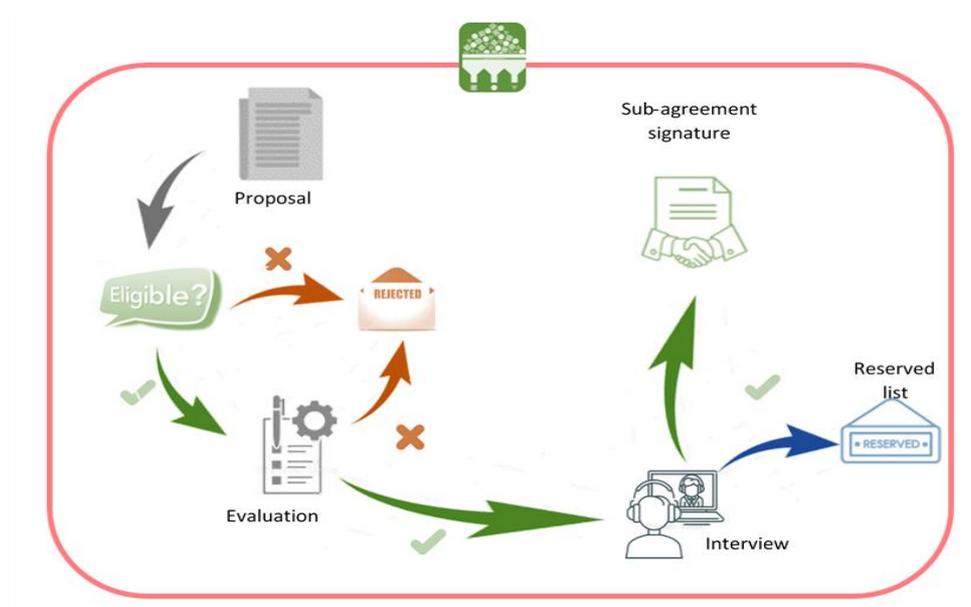

- It is not excluded from the possibility of obtaining EU funding under the provisions of both national and EU law, or by a decision of both national or EU authority,
- Via the principal investigator that he/she agrees with the terms presented in Annex 1-Indicative Sub-grant Agreement Form.

4 EVALUATION PROCESS

4.1 PROPOSAL EVALUATION AND ACCESS TO THE ONTOCHAIN FUNDING

Proposals are submitted in a single stage and the evaluation process is composed of three stages as presented hereafter.

- Stage 1: Admissibility & eligibility check
- Stage 2: Proposals evaluation
- Stage 3: Online interviews and final selection

4.1.1 Admissibility and eligibility check

Admissibility and eligibility criteria for each proposal are checked by the ONTOCHAIN Consortium staff. A proposal may be declared ineligible or inadmissible at any stage.

To be considered admissible, a proposal must be:

- Submitted in the electronic submission system before the call deadline;
- Compliant with the specific eligibility conditions set out in the relevant parts of this guide (see section 3 of this guide). The eligibility filter enable the creation of a shortlist of proposals to be evaluated;
- Readable, accessible and printable;
- Complete and include the requested administrative data, and any obligatory supporting documents specified in the call (following the template presented in Annex 2 and in Annex 3 if necessary);
- Include the research proposal description. **Applicants must strictly follow the template, instructions as well as pages limitation for drafting the research proposal included in this guide (Annex 3).** A proposal will only be considered eligible if its content corresponds specifically to the topics of the ONTOCHAIN Call 3 or is proposed as “open topic” and demonstrates that it aims to advance the state of the art especially with regards to the ONTOCHAIN Framework and application domain.

4.1.2 Proposal evaluation

The evaluation of proposals is carried out by the ONTOCHAIN Consortium with the assistance of independent experts. ONTOCHAIN Consortium staff ensures that the process is fair and in line with the principles contained in the European Commission's rules on Proposal submission and evaluation. To facilitate the independent experts and the evaluation process, the EasyChair platform (<https://easychair.org/>) will be used.

Experts perform evaluations on a personal basis, not as representatives of their employer, their country or any other entity. They are required to be independent, impartial and objective, and to behave throughout in a professional manner. They sign an expert contract, including a declaration of confidentiality and absence of conflict of interest, before beginning their work.

All experts must declare beforehand any known conflicts of interest, and must immediately inform the ONTOCHAIN Consortium staff if they detect a conflict of interest during the course of the evaluation. The expert contract also requires experts to maintain strict confidentiality with respect to the whole evaluation process. They must follow any instruction given by the ONTOCHAIN Consortium to ensure this. Under no circumstance may an expert attempt to contact an applicant on his/her own account, during the evaluation process. Confidentiality rules must be adhered to at all times before, during and after the evaluation.

Each proposal is evaluated by a set of 2 experts (one from the ONTOCHAIN Consortium and one external) according to the following criteria:

1-Excellence and innovation (40% weighting)

- Clarity, pertinence, soundness of the proposed solution in the ONTOCHAIN context and credibility of the proposed methodology
- Extent that the proposed work is beyond the state of the art, and demonstrates innovation potential in relation to ONTOCHAIN objective (e.g. ground-breaking objectives, novel concepts and approaches, new products, services or business and organisational models)
- Excellence/Capacity of the applicant

2-Expected impact and value for money (30% weighting)

- Contribution to establishing and strengthening a durable software ecosystem to achieve trustworthy content handling and information exchange as well as trustworthy service exchange in the next generation Internet/social networks
- Impact of the innovation on the needs of European and global markets
- Quality of the proposed measures to exploit and disseminate the project results (including management of IPR), and to manage research data where relevant in the context of ONTOCHAIN

3-Project Implementation (30% weighting)

- Quality and effectiveness of the work plan, including extent to which the resources assigned to the work are in line with its objective and deliverables
- Risk management and mitigation
- Integration capacity in the overall ONTOCHAIN ecosystem

The experts will score each award criterion on a scale from 0 to 5 (half point scores may be given):

0=Proposal fails to address the criterion or cannot be assessed due to missing or incomplete information.

1=Poor, criterion are inadequately addressed or there are serious inherent weaknesses

2=Fair, proposal broadly addresses the criterion but there are significant weaknesses.

3=Good, proposal addresses the criterion well, but a number of shortcomings is present.

4=Very good, proposal addresses the criterion very well but a small number of shortcomings is present.

5=Excellent, the proposal successfully addresses all relevant aspects of the criterion. Any shortcomings are minor.

For each criterion, the minimum threshold is 3 out of 5 points. The default overall threshold, applying to the sum of the three criteria scores with the corresponding weight each, is 10.

Each evaluator establishes an individual evaluation report.

Following the individual evaluations by the 2 experts, a consensus activity, typically mediated by the evaluation tool is organised between the 2 experts to find a consensus between them on the quality of the proposal based on the 2 evaluation reports. Comments and scores are validated by the 2 experts in a consolidated evaluation report.

Where necessary, an additional review of projects for which there was a lack of consensus in terms of scoring by individual evaluators or for which additional clarifications are required is undertaken by the ONTOCHAIN topic referent, member of the ONTOCHAIN Consortium staff. In these cases an additional external evaluator is appointed to review the proposal and the final score is obtained based on the consensus of the 3 evaluators, one internal and 2 external to the consortium.

The ONTOCHAIN consortium then formally approves 2 separate ranked lists:

- a) the ranked list of all topics A applications,
- b) the ranked list of all topics B applications.

The admission to the online interview for **topics A** applications follows these rules:

1. The first 6 top ranked proposals are admitted to the online interview,
2. If one of the topics of objective A (e.g. A-3) has no proposal included in this short list, the list will be extended to include the best 2 ranked proposal under this topic leading in that case to up to 8 proposals selected for the interview.
3. In any case, all proposals admitted to the online interview must reach the scores threshold.

The admission to the online interview for **topics B** applications follows these rules:

1. The first 18 ranked proposals are admitted to the online interview,
2. In any case, all proposals admitted to the online interview must reach the scores threshold.

Regarding the communication of the results, each applicant will receive via e-mail a letter informing of the decision whether a rejection decision motivated by an Evaluation Summary Report or an invitation to the online pitching and interview session.

4.1.3 Online interview and final selection

The top projects per topic at the end of the proposal evaluation stage according to the rules just described, will be invited to the final selection stage, which involves a pitch presentation and a Q&A session.

The interview aims to deeply understand the project concept and centrality to the ONTOCHAIN vision, team skills & competencies, capacity and willingness to exploit the results under a commonly agreed plan.

The interview will be carried out by the evaluation board composed of the ONTOCHAIN topics referents and the ONTOCHAIN advisory board members. On the basis of 10 minutes pitching and 20 minutes of Q&As, the evaluation committee will assess the finalist project proposals against the following criteria:

- **Credibility of proposed project outcomes:** Based on the explanations of the proposed solutions, implementation plan, and evaluation of the overall expected value of each project proposal.
- **Value for money:** Significance of the project outcomes for ONTOCHAIN with respect to the project duration.
- **Collaborative Spirit/Commitment:** Evidence of the applicant's willingness to enter the ONTOCHAIN community/ecosystem and commitment to get involved in the future.
- **Business compatibility:** Understand early exploitation plans and compatibility check against joint overall exploitation plans for ONTOCHAIN platform.

Online interviews will be recorded to assure the maximum transparency of the evaluation process. It will be evaluated by all internal evaluators and by ONTOCHAIN advisors to reach a final agreement about scores and the written report, which will be structured according to the 4 criteria just mentioned. **Any of the 4 criteria will receive a score from 0 to 5, including the possibility of half score. The score for the interview will be the average of the scores of the 4 criteria.**

Based on these final scores, two short lists of winners will be produced, a list for topic A projects and a list for topic B projects.

For topic A projects, 1 winner per topic A will be designated, i.e. the best for the topic A1, the best for the topic A2, the best for the topic A3.

For topic B projects, 11 winners will be designated: the best scored, independently from topics.

Remaining proposals will be maintained on a reserve list and potentially be later admitted in case of withdrawal or failure of one of the projects initially admitted to successfully complete any phase of the contract signing process.

The list of selected projects is then submitted to the European Commission for final screening and validation.

Regarding the communication of the results, each applicant selected to the interview will receive via e-mail, a letter informing of the decision motivated by an Evaluation Summary Report that will include a consolidated version of the results pertaining to the proposal and the interview.

4.1.4 Scientific misconduct and research Integrity

Issues of scientific misconduct and research integrity are taken very seriously. In line with the Horizon 2020 Rules for Participation, appropriate action such as disqualification of the application, termination of the Grant Agreement Preparation phase or, if the Grant Agreement has been signed, the implementation of liquidated damages and financial penalties, suspension of payments, recoveries and termination of the Grant Agreement, will be taken against any applicants/beneficiaries found to have misrepresented, fabricated or plagiarised any part of their proposal.

4.2 THE NEGOTIATION PROCESS

The objective of the negotiations is to fulfil the legal requirements between the ONTOCHAIN consortium and each selected project of the call. It covers essentially the status information of the beneficiaries. The legal requirements for legal entities and natural persons are provided in the table hereafter.

For legal entities	For natural persons
<p style="text-align: center;">A legal existence:</p> <p>Company Register, Official Journal and so forth, showing the name of the organization, the legal address and registration number and, if applicable, a copy of a document proving VAT registration (in case the VAT number does not show on the registration extract or its equivalent)</p> <p style="text-align: center;">Specifically for SMEs:</p> <p>1. A proof of the SME condition is required:</p> <ul style="list-style-type: none"> - If the applicant has been fully validated as an SME on the Beneficiary Register of the H2020 Participant Portal, the PIC number must be provided. - If the applicant has not been fully validated as an SME on the H2020 Participant Portal, the following documents will be required to prove the status as an SME: <p>2. In the event the beneficiary declares being non-autonomous, the balance sheet and profit and loss</p>	<ol style="list-style-type: none"> 1. A copy of the ID-card or passport of participant(s) in the project team will be required. 2. A proof for each participant in the project that (s)he is legally established and working in an eligible country (see section 3.2).

account (with annexes) for the last period for upstream and downstream organizations is required.

3. Status Information Form. It includes the headcount (AWU), balance, profit & loss accounts of the latest closed financial year and the relation, upstream and downstream, of any linked or partner company.

4. Supporting documents. In cases where either the number of employees or the ownership is not clearly identified: any other supporting documents which demonstrate headcount and ownership such as payroll details, annual reports, national regional, association records, etc.

Bank account information:

The account where the funds will be transferred will be indicated via a financial information form signed by the entity, individuals and the bank owners. The holder of the account will be the legal entity and/or all the individuals or the coordinator of the group on its own (consortium of legal entities or consortium of legal entities and natural persons) if allowed by the other team members.

Sub-grantee funding agreement:

Signed between the ONTOCHAIN Consortium (represented by its coordinator European Dynamics), and the beneficiary/ies.

Have a careful look at the document in Annex 1.

This information will be requested by the ONTOCHAIN consortium according to specific deadlines. Failing to meet the deadlines requested will directly end up the negotiation process. These deadlines will be announced in the decision letter for successful applicants.

4.3 MONITORING PROCESS ALL ALONG THE SUB-PROJECTS DURATION

For the monitoring of the progress and proper evolution of the selected projects, selected Third Parties will have to attend several mandatory internal events organised with the ONTOCHAIN Consortium. Indicatively they are the following:

- Kick-off event devoted to knowing the different Third Parties and their foreseen contribution to ONTOCHAIN.
- Meeting for the set-up of clear KPIs that will be linked to the funding of the selected Third Parties.

- Midterm event devoted to the follow up of the progress of the Third Parties according to the defined KPIs with pitch contest where the Third Parties will present their projects outcomes in particular their prototype and their deployment scenarios.
- Final event with pitch contest where the Third Parties will present their solution in particular their modularised software components ready for distribution.

5 FINANCIAL SUPPORT

5.1 INDICATIVE DISTRIBUTION OF THE FUNDS

Selected teams will become part of the ONTOCHAIN programme and will go through an exhaustive sequential process which will last 10 months. The maximum amount of the fund will vary depending on the type of team (See Section 3.1 Type of Beneficiaries) as indicated in the table below and providing that all of the phases have been completed.

Type of team	Maximum funding
Team of natural persons	89 625€
Legal entity or consortium of legal entities or combination of legal entities and natural persons	119 500€

Payments will be done in 4 instalments based on concrete results. A detailed evaluation process will be presented in the Open Call 3 guide for implementation for the related periods.

- **Beginning of the implementation and Pre-financing:**
During the first weeks of the project implementation, each team will define with their coaches a set of clear and objective KPIs to be achieved and linked with the funding. These KPIs are different for each team and are related to the solution to be implemented. These KPIs will help measure the progress if any, but also the commitment and involvement of the teams (i.e. attending periodic call meetings with the coaches, meeting the deadlines for reporting, etc.). After this KPIs definition, a pre-financing of **30%** will be released.

- **First midterm review linked to the delivery of deliverable D2 and 2nd payment:**

At first midterm of the project implementation, the coaches will assess the KPI's percentage of execution of the project on the basis of the evaluation of the deliverable D2. A 100% completion of the KPIs for the related period will unlock the total of the 2nd payment which is **20%** of the total amount. A lower completion of the tasks will launch the proportional payment. If the KPIs for the related period are met by less than 50%, the payment will be retained until KPIs for the period are assessed as completely reached. If less than 25%, the teams will be automatically disqualified from the process.

- **Second midterm review linked to the delivery of deliverable D3 and 3rd payment:**

At the second midterm of the project implementation, the coaches will assess the KPI's percentage of execution of the project on the basis of the evaluation of the deliverable D3. A 100% completion of the KPIs for the related period will unlock the total of the 2nd payment which is **20%** of the total amount. A lower completion of the tasks will launch the proportional payment. If the KPIs for the related period are met by less than 50%, the payment will be retained until KPIs for the period are assessed as completely reached. If less than 25%, the teams will be automatically disqualified from the process.

- **Final review and last payment:**

At the end of the project implementation, third parties will be paid according to their overall completion of KPIs materialised by the deliverable D4.

A final event will be used to evaluate third parties on a face to face pitch contest. The third parties will present their implemented solution, and their business plan in the context of ONTOCHAIN.

A panel of evaluators consisting of the ONTOCHAIN Consortium and Advisory Board members, will assess the teams to release the final payment (remaining 30%). Only in the case of an underperformance below of a 25% the team will be disqualified, and no further payment released.

5.2 SUMMARY OF THE FUNDING PER TYPE OF BENEFICIARY

	Project			
	Pre- financing 30% of the total funding	Interim Payment 20% of the total funding	Pre- financing 20% of the total funding	Final Payment 30 % of the total funding
Indicative dates	M2	M4	M8	M10
Team of Natural persons	26 887, 5€	17 925€	17 925€	26 887, 5€
Legal Entity(ies) or combination of legal entities or combination of legal entity (ies) and individual(s)	35 850€	23 900€	23 900€	35 850€

These numbers are indicative, detailed payment schedule and payment conditions will be settled in the Sub-grant Agreement (Indicative, Annex 1) at the time of the signature.

5.3 ORIGIN OF THE FUNDS AND SPECIFIC PROVISION REGARDING MULTIPLE BENEFICIARIES

Any selected proposer will sign a dedicated Sub-Grantee Funding Agreement (Annex 1) with the ONTOCHAIN project coordinator (on behalf of ONTOCHAIN Consortium).

o Specific provision regarding contracting in case of multiple beneficiaries

In the case of projects with multiple beneficiaries (Team of natural persons, combination of legal entities, combination of legal entities and individual(s)), a Team/Consortium Agreement that designates among other the Coordinator/Authorized representative of the Team/Consortium has to be adopted and signed by the multiple beneficiaries prior to the signature of the ONTOCHAIN Sub grantee Agreement.

The Coordinator/Authorized representative of the Team/Consortium signs the ONTOCHAIN Sub grantee Agreement on behalf of the multiple beneficiaries.

The Coordinator /Authorized representative receives the funding and must distribute the payments between the beneficiaries according to the conditions set in the Team/Consortium Agreement.

The funds attached to the Sub-Grantee Funding Agreement come directly from the funds of the European Project ONTOCHAIN, and the ONTOCHAIN consortium is managing the funds according to the Grant Agreement Number 957338 signed with the European Commission.

As will be indicated in the Sub-Grantee Funding Agreement, this relation between the sub-grantees and the European Commission through ONTOCHAIN project carries a set of obligations to the sub-grantees with the European Commission. It is the task of the sub-grantees to accomplish them, and of the ONTOCHAIN consortium partners to inform about them.

6 PREPARATION AND SUBMISSION OF THE PROPOSALS

The submission will be done through the F6S platform (<https://www.f6s.com/ontochain-open-call-3/apply>) which is directly linked with the ONTOCHAIN Programme. The applicants are required to register a profile at F6S to be able to submit a proposal.

The documents that will be submitted are:

- **Application form (Annex 2):** administrative questions to be completed directly in the F6S platform. In addition, some general questions for statistical purposes and tick boxes to be clicked by the third parties confirming they have read the conditions and agree with the conditions defined in this document. In addition, an Annex 4 will be uploaded in case that more than 3 applicants participate as individuals (natural persons) or/and more than 3 applicants participate as organisations (Legal entities) filled with the information about the applicant(s) that do not fit in the application form.
- **Proposal description (Annex 3):** document in PDF format containing the description of the project. It will include three different sections:
 - (1) Project Summary,
 - (2) Organisation background,
 - (3) Detailed proposal description.

The project proposals must strictly adhere to the template provided by the ONTOCHAIN consortium via the F6S platform, which defines sections and the overall length.

Participants are requested to carefully read and follow the instructions in the form. Evaluators will be instructed not to consider extra material in the evaluation.

Additional material, which has not been specifically requested in the online application form, will not be considered for the evaluation of the proposals. Data not included in the proposal will not be taken into account.

It is strongly recommended not to wait until the last minute to submit the proposal. Failure of the proposal to arrive in time for any reason, including communication delays, automatically leads to rejection of the submission. The time of receipt of the message as recorded by the submission system will be definitive.

ONTOCHAIN offers a dedicated support channel available for proposers at ontochain@ngi.eu for requests or inquiries about the submission system or the call itself. Those received after the closure time of the call will neither be considered nor answered.

7 APPLICANTS COMMUNICATION FLOW

7.1 GENERAL COMMUNICATION PROCEDURE

The applicants will receive communications after each step of the evaluation process indicating if they passed or not. A communication will also be sent to applicants rejected, including the reasons for the exclusion.

7.2 APPEAL PROCEDURE

If, at any stage of the evaluation process, the applicant considers that a mistake has been made or that the evaluators have acted unfairly or have failed to comply with the rules of this ONTOCHAIN Open Call, and that her/his interests have been prejudiced as a result, the following appeal procedures are available.

A complaint should be drawn up in English and submitted by email to: ontochain@ngi.eu

Any complaint made should include:

- Contact details;
- The subject of the complaint;
- Information and evidence regarding the alleged breach.

Anonymous complaints or those not providing the mentioned information will not be considered.

Complaints should also be made within five (calendar) days since the announcement of the evaluation results to the applicants.

As a general rule, the ONTOCHAIN Team will investigate the complaints with a view to arriving at a decision to issue a formal notice or to close the case within no more than

twenty days from the date of reception of the complaint, provided that all the required information has been submitted by the complainant. Whenever this time limit is exceeded, the ONTOCHAIN Consortium will inform the complainant by email of the reasons for the unforeseen delay and the subsequent steps.

8 SUPPORT SERVICES PROVIDED BY ONTOCHAIN TO THIRD PARTIES

Selected participants will receive support with the following services:

- **Access to Infrastructure:**
 - All the teams selected will have access if willing and needing so, to the iExec blockchain platform, for their off-chain developments (see 8.1 for more details) and to the MyIntelliPatent web application, populated with updated blockchain applications, for patent analysis and monitoring (see 8.2 for more details).
The use of the iExec platform and of the MyIntelliPatent web application are not mandatory. Applicants shall bear in mind that interoperability of the solutions built within the ONTOCHAIN project is a paramount requirement.
 - The use of a full-fledged ONTOCHAIN Network under OC3 topic A.3.
- **Business support services:** To support the teams to exploit their use cases and successfully reach the market, different trainings and sessions with mentors will be organised. Depending on the team profile, aspects such as Value Proposition, pitching or IPR (among others) will be explored.
- **Communication support services:** Major visibility, promotion and networking opportunities are offered as part of the ONTOCHAIN project and the Next Generation Internet initiative. Selected teams will:
 - have access to communication tool kits and co-branding materials,
 - be showcased in the ONTOCHAIN project website,
 - be interviewed and promoted on relevant media channels
 - be invited to participate in top events
 - connect with a vibrant ecosystem of innovators, investors, industry players and public authorities.

8.1 THE IEXEC COMPUTING PLATFORM

The iExec decentralized cloud marketplace <https://iex.ec/> connects cloud resource sellers with cloud resource buyers, encouraging an ecosystem of decentralized and autonomous, privacy-preserving application, which allows to support a decentralized marketplace of applications, data and resources through decentralized cloud computing in Ethereum.

The platform supports public, private and federated blockchain solutions.

The platform has been developed with more than four years of efforts by iExec <https://iexec.ec/about-us/>, an innovative SME French company whose founders came from the Inria and the Chinese Academy of Science.

The iExec software, which can be used by ONTOCHAIN participants to base their evolutions, is available under the open source license Apache 2.0.

For more information about the code and sources you can access: <http://github.com/iexecBlockchainComputing/>

For example Dapps, you can access: <https://github.com/iExecBlockchainComputing/iexec-apps>

A more detailed information about the platform is provided on the technical document “ONTOCHAIN background” available at <https://ontochain.ngi.eu/apply>

8.2 THE PATENT WEB APPLICATION MYINTELLIPATENT

MyIntelliPatent (<https://www.intellisemantic.com/patent-solution.html>) is a web application developed by IntelliSemantic (<https://www.intellisemantic.com/>) to analyse and monitor technology specific collection of patents.

Patents are a very interesting source of technical information, because they have to disclose all technical details required to replicate the invention, when the patent expires, and include the status of art and problem solved.

Moreover, the aggregate analysis of patents in a specific technical domain allows to timely discover technology trends, opportunities and threads.

Blockchain is a quickly evolving area of patenting: the paper “Blockchain patent landscaping: An expert based methodology and search query” by Nigel Clarke and alii, World Patent Information June 2020 <https://doi.org/10.1016/j.wpi.2020.101964> mentions that the number of patents in the year 2018 doubled any 3 or 4 months.

Hence for the project ONTOCHAIN, IntelliSemantic will set up a dedicated and password-protected server for analysing blockchain-related patent collections, with a quarterly update of collections.

The interface exposed to the users allows three levels of views.

At the higher level view, users can access to summary tables, as the table showing the number of patents by technology (e.g. “smart contracts”).

By clicking on a specific number (e.g. corresponding to “smart contracts”), the user accesses the list of patents associated to the specific feature selected.

Finally, by clicking on a specific patent, the user accesses to all details of the patent, as status of the art mentioned.

By using this interface, users can easily navigate patent information to identify the state of the art and also to make a preliminary check whether to apply for a patent or not; we should not overlook this possibility. For more information, you can refer to the European IPR help desk, as for example IPR and Software <http://iprhelppdesk.eu/event/webinar-ipr-software>

On its side, IntelliSemantic, by using other functions, on a quarterly basis will collect, categorize, store and present to the users any new patents.

8.3 THE SPECIFICATION FROM THE 7 SELECTED PROJECTS OF OPEN CALL 1

In ONTOCHAIN open call 1, the 7 final projects have provided design specifications for the ONTOCHAIN Ecosystem. The solutions technologies that they proposed for the ONTOCHAIN framework are:

OntoSsivault: Gimly ID is a fully self-sovereign identity solution that brings trust and usability to users without compromising security and privacy of the ecosystem and its members. Gimly ID solution: a set of software applications and libraries that enable a fully self-sovereign identity to be managed in an ecosystem with transparent and user-friendly data consent and management and fully managed invisible cryptography for use with blockchain and other systems.

Demo video: <https://www.gimly.io/gimly-id/ontochain> .

KnowledgeX (KX): KX is a platform that connects the owners of data and independent data scientists to generate knowledge and solve domain specific problems. KnowledgeX (KX) proposes to build a secure marketplace for data science, where data owners can outsource data science tasks to independent contractors without risking loss of data. Also KX project aims to track reputation decentrally to avoid a “lemons market” scenario where only low-quality data scientists and data owners interact.

Demo video:<https://www.youtube.com/watch?v=AyFJw39i9qQ&t=7s>

Graphchain: is a framework for on-chain data management for Blockchains and was proposed as a foundational technology for **ONTOCHAIN**. It directly addresses the basic technological proposition of the **ONTOCHAIN** project, i.e., the synergy between ontologies and the Blockchain mechanisms. . GraphChain addresses a foundational technological challenge for **ONTOCHAIN**: storing on-chain data in native semantic formats.

Demo video: <https://www.youtube.com/watch?v=gEjrvGkUmMs>
<https://www.youtube.com/watch?v=6VoYWVoKSZ4>
<https://www.youtube.com/watch?v=u5Amkl5rmjs>

CopyrightLY: the approach of this project focuses on building an authorship and rights management layer for ONTOCHAIN. It will provide a set of services to claim authorship,

on both content and data. Moreover, it will be also possible to attach reuse terms to these claims, which will state the conditions to reuse the associated data or content. It is based on the combination of a set of blockchain smart contracts that manage authorship claim, complaints and reuse terms, including offering, negotiating and agreeing on these reuse conditions.

Demo video: <https://youtu.be/Ky8aowIP3wc>

HIBI: encompasses scalable blockchain, decentralized legal reputation and identity systems and interoperable semantic web technologies. This project formalizes human identity on the blockchain in a trustworthy, formalized, privacy preserving manner. It leverages the established EU framework for electronic identification and trust services (eIDAS) to accomplish this. HIBI will provide the root of trust for a generation of semantic web and EU based blockchain services by linking eIDAS compliant legal identities with blockchain-based key-pairs.

Demo video: <https://www.youtube.com/watch?v=nVNrArIW2yY>.

POC4COMMERCE: addresses the stated challenge of developing a consistent, unambiguous, and shared model supporting the semantic interoperability of the ONTOCHAIN heterogeneous stakeholders, by delivering a stack of the most appropriate ontologies for the building blocks of the ONTOCHAIN ecosystem in general and of eCommerce in particular. This project contributes to a shift towards a novel micro-economic model where individuals and companies cooperate and coordinate, deciding the allocation and utilization of resources, without third-parties intermediaries, instantiating the equilibrium between demand and supply.

Demo video: <https://www.youtube.com/watch?v=Muy3slZwN4A>

REPUTABLE: This project addresses the requirements for an effective reputation system for ONTOCHAIN. Reputable has the potential to provide a cross-platform privacy aware reputation system which leverages blockchain technology to achieve decentralized, verifiable calculation of reputation scores.

Demo video:

<https://www.dropbox.com/s/94kj68kwa8o3wx4/Reputable%20demo.mp4?dl=0>

For your proposal, you can find inspiration from the aforementioned. See also the **Open Call 3 document** and the ONTOCHAIN Selected project here: [Selected Projects | ONTOCHAIN \(ngi.eu\)](#).

8.4 THE SELECTED PROJECTS OF OPEN CALL 2

The 13 third parties' innovators enrolled for this call implement their projects for 1 of the 6 following topics:

- Decentralised oracles for ONTOCHAIN,
- Market mechanisms for ONTOCHAIN,
- ONTOCHAIN interoperability and APIs gateways,
- ONTOCHAIN network design and scalability,
- Semantic based marketplaces for ONTOCHAIN,
- Data provenance in ONTOCHAIN.

The selected sub projects are actually running and are briefly described hereafter per third parties innovators. For more details please follow the link: [Selected Projects | ONTOCHAIN \(ngi.eu\)](https://www.ontochain.eu/selected-projects).

ADOS: AirTrace Decentralized Oracle System

The aim of ADOS is to apply blockchain technologies to IoT (Internet of Things) systems, as current IoT systems can be lacking in certain key network aspects such as scalability, security, resource consumption and trustworthiness. This project can be a use case in any IoT application for example monitoring of soil contents in smart farms or distributed warther stations.

BOWLER: Blockchain-Oriented Warehouse & Low-Code Engine and Reasoner

The aim of BOWLER is to make a low-code, end-to-end, web-based IDE that will enable those which are not very familiar with Smart Contracts to learn how to program dApps. The main goal of this project is to make it easier for new programmers to start developing for blockchain technologies. An example of this project's use case would be to make a web-based PyCharm, but for Smart Contracts.

CARECHAIN: Supporting CARE through micro insurances using blockCHAIN

The aim of CARECHAIN is to make a platform for issuing microinsurances and compensation if conditions are met using Smart Contracts. Smart Contracts are encrypted and public, so no one can deny partaking in the process. CARECHAIN intends to build a platform and environment for executing smart contracts if all conditions are met, for example: policies for farmers based on damage a particular type of crop is likely to suffer under specific conditions, e.g. 100 mph winds; when those are met, the farmer receives compensation without the need for human inspectors. Without inspectors evaluating damages, claims can be quickly settled, allowing claimants rapid access to funds to keep businesses running.

DESMO-LD: Decentralized Smart Oracles for Trusted Linked Data

The aim of DESMO-LD is to design and implement a trustfun Oracle prototype and provide the necessary data for its operation. It uses Smart Contracts to gather off-chain data through oracles. It can be used to collect data from for example IoT devices and gather them in one place.

OriginTrail DKG: Decentralised and Scalable Knowledge Graph supporting ONTOCHAIN

The goal of OriginTrail DKG is to implement a rounded approach adding to ONTOCHAIN's distributed storage, core protocols and application protocols stack to facilitate transition from a broken data economy to a trusted, semantic, human-centric and privacy-by-design adopting knowledge economy. With this approach, OriginTrail DKG aims to vastly improve ways data and knowledge are being exchanged in a trustworthy, privacy-preserving and inclusive way in vital sectors such as supply chains, eScience, eCommerce, eInfrastructure and eEducation.

GEONTOLOGY

The aim of GEONTOLOGY is to make a geo-aware protocol for enabling cross-border operations and data exchange in a digital economy. Its main goal is to provide geolocation data to any transaction using smart contracts. It uses an innovative protocol called Proof of Offset which enables nodes to find out the country of origin of the contract which will in theory make scams harder. The use case can be any form of purchase using the blockchain.

MFSSIA: Multi-Factor Self-Sovereign Identity Authentication

The aim of MFSSIA is to create a multi-factor authentication service via blockchain. Blockchain is used to store authentication related data. The use case would be the same as oAuth is now, but for Web3.

NFTWATCH

The aim of NFTWATCH is to collect and aggregate information about NTF's and its marketplaces. It can be used to analyse either on or off-chain data. The use case would be to study the NFT trends.

ONTOSPACE: a stable, scalable, efficient and cost-effective network for ONTOCHAIN

The aim of ONTOSPACE is to expand on GraphChain's project to enable networks to emerge. It will provide all necessary building blocks to make the deployment of the ecosystem as easy as possible with graph databases. Ontospace can be used to develop applications using Ontologies or Knowledge graphs and Smart Contracts.

Perun-X: Efficient Cross-Chain Infrastructure for ONTOCHAIN

The aim of Perun-X is to create a framework for transactions between different blockchains that can be performed at minimal cost. It can also be used to execute code on a specific channel, leading to potentially cross-chain contracts. A use case would be any kind of cross-platform application or exchange.

PiSwap: Price-Building-Mechanism for asymmetric NFT-markets

The aim of PiSwap is to solve the current problem of NFT markets with enabling crowdsended markets (independence of primary and secondary markets), building decentralised price (enabling margin trading-short/long, mechanism to determine price) and providing automated liquidity (similar to UniSwap). A use case would be buying or selling an NFT on PiSwap.

PRINGO - Private Incentives for Common Goods

The aim of PRINGO is to make a mechanism for funding charitable causes via blockchain. It provides a direct link from common goods to companies/charities. A use case would be someone scanning a tree to be used in a video game via NFTs.

PS-SDA: Provenance services with Smart Data Agreements

The aim of PS-SDA is to make a platform for human-centric data management. It enables data to be encrypted on the chain and not accessed by everyone. It follows GDPR. A use case would be a company storing its employee's user data.

9 INTELLECTUAL PROPERTY RIGHTS (IPR)

9.1 IPR OWNERSHIP OF THE SUB-GRANTED PROJECTS

The ownership of all IPR created by the beneficiaries, via the ONTOCHAIN funding, will remain with them. Results are owned by the Party that generates them. The Sub-Grant Agreement (Annex 1) will introduce provisions concerning joint ownership of the results of the sub-granted projects.

9.2 COMMUNICATION OBLIGATIONS

Any communication or publication of the beneficiaries shall clearly indicate that the project has received funding from the European Union via the ONTOCHAIN project, therefore displaying the EU and project logo on all printed and digital material, including websites and press releases. Moreover, beneficiaries must agree that certain information regarding the projects selected for funding can be used by ONTOCHAIN consortium for communication purposes.

10 SUPPORT FOR THE APPLICANTS

For more information about the ONTOCHAIN Open Calls, please check the Frequently Asked Questions (FAQs) section included at <https://www.ONTOCHAIN.ngi.eu/faq>.

For further information on the Open Call, in case of any doubt regarding the eligibility rules, the information that is to be provided in the Application Form, or if you encountered technical issues or problems with the Application Form, please contact ONTOCHAIN Technical Helpdesk email: ontochain@ngi.eu

11 INDICATIVE TIMELINES

Submission to the ONTOCHAIN Open Call 3 will open on the 23rd of May 2022 at 12:00 PM CEST and close on the 25th of July 2022 at 17:00 CEST. Dates for the different phases are outlined below but may be subject to change if any modifications in the project's schedule occur.

The table below presents the indicative dates during which each phase of ONTOCHAIN Call 3 will take place.

Description	Indicative dates
Call Announcement	23 May 2022 at 12:00 PM CEST
Call closure and submission deadline	25 July 2022 at 17:00 CEST
Evaluation Period	Until 19 September 2022

Description	Indicative dates
Signature of Sub-grant Agreement	Until 1 October 2022
Projects	From 1 October 2022 to 31 July 2023

ANNEXES

ANNEX 1- INDICATIVE SUB-GRANT AGREEMENT FORM

ONTOCHAIN FUNDING SUBAGREEMENT

1 CONTRACTING PARTIES

The rights and obligations contained in this Funding Agreement derived from the ONTOCHAIN Grant Agreement and Consortium Agreement.

This ONTOCHAIN Funding Agreement for providing financial support to the Selected Third Party, hereinafter referred to as the “Agreement”, is entered into by and between:

EUROPEAN DYNAMICS LUXEMBOURG (ED), established in [REDACTED], [REDACTED], VAT number: [REDACTED], represented for the purposes of signing the Agreement by [REDACTED], legal representative of ED, hereinafter referred to as “Cascade Funding Partner”,

And

- [if a legal entity]:

<p>[OFFICIAL NAME OF THE SELECTED THIRD PARTY (Acronym)],</p> <p>VAT Number: [VAT]</p> <p>Legal Status: [XXX]</p> <p>PIC Number: [PIC NUMBER]</p> <p>Name of the legal signatory: [Name]</p> <p>Legal office address: [ADDRESS and COUNTRY]</p>

- [if a Team of Natural persons]:

<p>[FIRST AND LAST NAME OF THE NATURAL PERSON]],</p> <p>ID card/Passport Number: [Number]</p> <p>Date of issue: [Date]</p> <p>Tax payer identification Number: [Number]</p> <p>Legal address: [ADDRESS and COUNTRY]</p>

[FIRST AND LAST NAME OF THE OF THE NATURAL PERSON 2],

ID card/Passport Number: [Number]

Date of issue: [Date]

Tax payer identification Number: [Number]

Legal address:[ADDRESS and COUNTRY]

[FIRST AND LAST NAME OF THE OF THE NATURAL PERSON 3],

ID card/Passport Number: [Number]

Date of issue: [Date]

Tax payer identification Number: [Number]

Legal address:[ADDRESS and COUNTRY]

- [if a Consortium of legal entities]:

[OFFICIAL NAME OF THE SELECTED THIRD PARTY 1 (Acronym)], Project Manager and Authorized representative of the consortium,

VAT Number: [VAT]

Legal Status:[XXX]

PIC Number:[PIC NUMBER]

Name of the legal signatory: [Name]

Legal office address:[ADDRESS and COUNTRY]

[OFFICIAL NAME OF THE SELECTED THIRD PARTY 2 (Acronym)],

VAT Number: [VAT]

Legal Status:[XXX]

PIC Number:[PIC NUMBER]

Name of the legal signatory: [Name]

[OFFICIAL NAME OF THE SELECTED THIRD PARTY 2 (Acronym)],

VAT Number: [VAT]

Legal Status:[XXX]

PIC Number:[PIC NUMBER]

Name of the legal signatory: [Name]

Legal office address: [ADDRESS and COUNTRY]

Referred to as “Selected Third Party”,

Hereinafter sometimes individually or collectively referred to as “Party” or “Parties”.

Whereas European Dynamics and its partners according to the Ontochain Consortium Agreement, (hereinafter sometimes collectively referred as the “**ONTOCHAIN Beneficiaries**” and individually and alternatively referred as a “**ONTOCHAIN Beneficiary**”) participate to the H2020 project entitled “**ONTOCHAIN - Trust traceable and transparent ontological knowledge on blockchain**” (hereinafter the “**ONTOCHAIN Project**”);

Whereas the ONTOCHAIN Beneficiaries entered into a Grant Agreement N° 957338 with the European Commission (the “**Grant Agreement**” or “**GA**”) and signed together in 2020 a Consortium Agreement with respect to the ONTOCHAIN Project (the “**Consortium Agreement**” or “**CA**”).

Whereas the ONTOCHAIN Project involves financial support to selected third parties through a cascade funding scheme (hereinafter “**Cascade Funding**”).

Whereas further to an open call for a specific research as described in Annex 1 “**ONTOCHAIN Specific Contract**”, the Selected Third Party has been selected to implement such research.

Whereas the Selected Third Party will be in charge of the implementation of such research with also the participation of the ONTOCHAIN Beneficiaries identified in Annex 1 “**ONTOCHAIN Specific Contract**”.

Whereas the Cascade Funding Partner is willing to provide technical and financial support to the Selected Third Party for the implementation of such Research and the Selected Third Party is willing to receive such funding under the terms and conditions of this Agreement.

Whereas in accordance with the Grant Agreement and the Consortium Agreement, the Cascade Funding Partner shall sign an agreement with the Selected Third Party compliant with the GA and CA, after validation by the other Participating Partners.

Whereas the Cascade Funding Partner is responsible for the execution of this Agreement with the Selected Third Party and for the monitoring of the Research.

Now therefore it has been agreed as follows:

2 DEFINITIONS

Words beginning with a capital letter shall have the meaning defined in the preamble of the Agreement or in this Section:

- **Access Rights** means rights to use Results or Background in accordance with the stipulations of the H2020 General MGA – Multi and under the terms and conditions laid down in this Agreement.
- An **Affiliated Entity** of a ONTOCHAIN Beneficiary means any legal entity shown in Attachment 4 to the CA, directly or indirectly Controlling, Controlled by, or under common Control with that Party, for so long as such Control lasts;
- **Agreement** means this Funding Agreement, together with its Annexes.
- **Background** means any and all, data, information, know-how– whatever its form or nature (tangible or intangible), including any rights such as intellectual property rights – listed in Annex 1 “ONTOCHAIN Specific Contract” – that is Needed to implement the Project or exploit the Results and that is:
 - owned or controlled by a Party or a ONTOCHAIN Beneficiary prior to the date of signature of the Specific Contract (Annex 1); or
 - developed or acquired by a Party or a ONTOCHAIN Beneficiary independently from the work in the Research even if in parallel with the performance of the Research, but solely to the extent that such data, information, know-how and/or intellectual property rights are introduced into the Industrial Experiment by the owning Party
- **Controlled Licence Terms** means terms in any licence that require that the use, copying, modification and/or distribution of Software or another work (“Work”) and/or of any work that is a modified version of or is a derivative work of such Work (in each case, “Derivative Work”) be subject, in whole or in part, to one or more of the following:
 - (where the Work or Derivative Work is Software) that the Source Code or other formats preferred for modification be made available as of right to any third party on request, whether royalty-free or not;
 - that permission to create modified versions or derivative works of the Work or Derivative Work be granted to any third party;
 - that a royalty-free licence relating to the Work or Derivative Work be granted to any third party.

For the avoidance of doubt, any Software licence that merely permits (but does not require any of) the things mentioned in a) to c) is not under Controlled Licence Terms (and so is under an Uncontrolled Licence).

- **Exploitation** or **Exploit** means the use of results in further research activities other than those covered by the action concerned, or in developing, creating and marketing a product or process, or in creating and providing a service, or in standardisation activities;
- **Financial Support** means the cash element of the financial support to be given by the Cascade Funding Partner to the Selected Third Party for the implementation of the Industrial Experiment as detailed in Annex 1 “ONTOCHAIN Specific Contract”.
- **Research** means the research detailed in Annex 1 “ONTOCHAIN Specific Contract” to be carried out by ONTOCHAIN Beneficiaries and the Selected Third Party.

- o **Participating Partners** means the entities and organisations participating in the Research, as listed in Annex 1.

3 CONDITIONS FROM THE GRANT AGREEMENT AND THE CONSORTIUM AGREEMENT REFLECTED IN THE AGREEMENT

The Cascade Funding Partner receives funding from the European Commission for organizing the Research. Under the ONTOCHAIN Grant Agreement or the Consortium Agreement, some of the obligations have to be imposed on the Selected Third Party. Those obligations are reflected in this Agreement. The specific obligations that the Selected Third Party must ensure are described in the Multi-Beneficiary General Model Grant Agreement (H2020 General MGA – Multi), available at: http://ec.europa.eu/research/participants/data/ref/h2020/mga/gga/h2020-mga-gga-multi_en.pdf, in articles 6, 22, 23, 35, 36, 38 and 46. These articles are part of the Agreement, by reference only.

The Selected Third Party acknowledges and agrees that these obligations comprised in this Agreement including Annex 1 and in the Multi-Beneficiary General Model are fully applicable to it and shall do everything that is necessary to comply with these obligations, it being understood that the Selected Third Party is only bound by this Agreement and not by the GA or CA.

4 TERMS AND CONDITIONS FOR THE FINANCIAL SUPPORT

4.1 The Selected Third Party shall take part in the Research in accordance with the state of the art. The Selected Third Party shall carry out the tasks according to the schedule set forth in Annex 1 “ONTOCHAIN Specific Contract” at the latest and shall report to the Cascade Funding Partner on the activities’ progress in regular intervals as indicated in Annex 1 “ONTOCHAIN Specific Contract”.

4.2 The Selected Third Party shall attend all group and individual coaching and mentoring sessions provided by the ONTOCHAIN Beneficiaries or the Cascade Funding Partner over the course of the Research.

4.3 The Cascade Funding Partner shall give Financial Support for the Research carried out by the Selected Third Party, within the limits and in accordance with the Guide for Applicants and schedule of payments specified in Annex 1 “ONTOCHAIN Specific Contract” and always subject to:

- o A favourable resolution by the evaluators and coaches responsible for assessing the Project in each of the stages (a set of deliverables and KPIs will be set-up by coaches and sub-grantees and their achievement monitored during the projects’ execution)

- The availability of funds in ONTOCHAIN bank account during the relevant payment period
- The prior written notice to the Selected Third Party of the date and amount to be transferred to its bank account
- Payments to the Selected Third Party will be made by the Cascade Funding Partner. In particular:
 - The Cascade Funding Partner reserves the right to withhold the payments in case the Selected Third Party does not fulfil its obligations and tasks as per the Guide for Applicant.
 - Banking and transaction costs related to the handling of any financial resources made available to the Selected Third Party by the Cascade Funding Partner shall be covered by the Selected Third Party.
 - Payments will be released no later than fifteen (15) calendar days after the notification by the Cascade Funding Partner.
 - The Selected Third Party is responsible for complying with any tax and legal obligations that might be attached to this financial contribution.

4.5 A written payment request must be sent by the Selected Third Party to the Cascade Funding Partner after reception of the favourable resolution by the evaluators and coaches.

4.6 The Selected Third Party shall complete in a comprehensive manner Annex 4 “Selected third party financial information” to the Agreement and shall notify any changes to the Cascade Funding Partner as soon as it has occurred. The Cascade Funding Partner shall not in any case be liable for any late payment incurred by a change in the financial identification of the Selected Third Party.

5 LIABILITY

5.1 The Selected Third Party shall comply with all applicable laws, rules and regulations, including, but not limited to safety, security, welfare, social security and fiscal laws, rules and regulations.

5.2 Selected Third Party shall not be entitled to act or to make legally binding declarations on behalf of the Cascade Funding Partner or any other ONTOCHAIN Beneficiary and shall indemnify all of the latter from any third party claim resulting from a breach of these obligations.

5.3 The contractual liability of the Cascade Funding Partner under this Agreement shall in any case be limited to the amount of the Financial Support provided to the Selected Third Party hereunder and the Cascade Funding Partner. The Cascade Funding Partner shall not in any case be liable for any indirect or consequential damages such as:

- loss of profits, interest, savings, shelf-space, production and business opportunities;

- lost contracts, goodwill, and anticipated savings;
- loss of or damage to reputation or to data;
- costs of recall of products; or
- any other type of indirect, incidental, punitive, special or consequential loss or damage.

5.4 This limitation of liability shall not apply in cases of wilful act or gross negligence.

5.5 The Selected Third Party shall fully and exclusively bear the risks in connection with the Research for which Financial Support is granted by the Cascade Funding Partner. The Selected Third Party shall indemnify the ONTOCHAIN Beneficiaries and the Cascade Funding Partner for all damages, penalties, costs and expenses which the ONTOCHAIN Beneficiaries or the Cascade Funding Partner as a result thereof would incur or have to pay to the European Commission or any third parties with respect to such Research financially supported and/or for any damage in general which the ONTOCHAIN Beneficiaries or the Cascade Funding Partner incur as a result thereof. In addition, should the European Commission have a right to recover against the Cascade Funding Partner or another ONTOCHAIN Beneficiary regarding the Financial Support granted under this Agreement, the Selected Third Party shall pay the sums in question in the terms and the date specified by the Cascade Funding Partner. Moreover, the Selected Third Party shall indemnify and hold the ONTOCHAIN Beneficiaries and the Cascade Funding Partner, their respective officers, directors, employees and agents harmless from and against all repayments, loss, liability, costs, charges, claims or damages that result from or arising out of any such recovery action by the European Commission.

5.6 In respect of any information or materials (including Results and Background) supplied by one Party to another Party or to a ONTOCHAIN Beneficiary, or by a ONTOCHAIN Beneficiary involved in the applicable Research to a Party, no warranty or representation of any kind is made, given or implied as to the sufficiency, accuracy or fitness for purpose nor as to the absence of any infringement of any proprietary rights of third parties.

Therefore,

- the recipient shall in all cases be entirely and solely liable for the use to which it puts such information and materials (including Results and Background), and
- there is no liability in case of infringement of proprietary rights of a third party resulting from any Access Rights.

6 INTELLECTUAL PROPERTY RIGHTS POLICY

The Selected Third Party acknowledges the terms of the "Intellectual Property Rights Policy" defined hereinafter. The Selected Third Party agrees that it will comply with the ONTOCHAIN Intellectual Property Rights Policy to ensure that the Cascade Funding

Partner will always be able to comply with such terms towards the other ONTOCHAIN Beneficiaries.

“Intellectual Property” designates the Background and the Results (foreground) generated in the project.

The background of the third party(ies) is described in Annex 1 “ONTOCHAIN Specific Contract” Article 1.

The background of ONTOCHAIN partners is described in Annex 4 “ONTOCHAIN consortium background”.

6.1 GENERAL PRINCIPLE REGARDING OWNERSHIP

Results are owned by the Party or by the ONTOCHAIN Beneficiary that generates them.

6.2 JOINT RESULTS

As requested in the Consortium Agreement signed between the ONTOCHAIN Beneficiaries, among which the Cascade Funding Partner, all Results generated by the Selected Third Party in the course of the Research with one or several ONTOCHAIN Beneficiaries shall be jointly owned.

Due to the mentoring and advising processes from the ONTOCHAIN Beneficiaries towards the development of the proposal by the Cascade Funding Partner, a 20% of ownership of any research and development activity outcomes excluding intellectual property rights is assigned to the ONTOCHAIN beneficiaries after the end of the subproject.

Where such Joint Result is covered by intellectual property rights, the joint owners shall execute a joint ownership agreement regarding the allocation and the terms and conditions of Exploitation of the Joint Results as soon as possible and before any industrial or commercial Exploitation.

Unless otherwise agreed:

- each of the joint owners shall be entitled to use their Jointly Owned Results for internal non-commercial research activities and educational purposes on a royalty-free basis, and without requiring the prior consent of the other joint owner(s), and
- each of the joint owners shall be entitled to otherwise exploit the Jointly Owned Results, including by granting non-exclusive licences to third parties (without any right to sub-license), if the other joint owners are given:

(a) at least 45 calendar days advance notice; and

(b) Fair and Reasonable conditions compensation taking into account the specific circumstances of the request for access, for example the actual

or potential value of the results or background to which access is requested and/or the scope, duration or other characteristics of the exploitation envisaged.

The joint owners shall agree on all protection measures and the division of related cost in advance.

6.3 ACCESS RIGHTS

6.3.1 For the purpose of this article 6.3, Background shall mean the Background as listed in the Research Contract and validated by the Participating Partners for the concerned Research.

The Selected Third Party endeavours to detail in Annex 1 “ONTOCHAIN Specific Contract” Article 1 the Intellectual Property under Controlled License Terms that will be used in the Research.

During the Research, the intended introduction of Intellectual Property (including, but not limited to Software) under Controlled Licence Terms in the Research requires the prior approval of the Cascade Funding Partner and of the Participating Parties to implement such introduction.

6.3.2 Due to provisions of the Consortium Agreement signed between the ONTOCHAIN Beneficiaries, Access Rights to Background and Results may be requested by the Selected Third Party from a Participating Partner only in the following case and if the following conditions are fulfilled:

Selected Third Parties have Access Rights to Background and Results if and when such Access Rights have been agreed upon on a case-by-case basis in a separate written agreement between the Selected Third Party and the ONTOCHAIN Beneficiary/ies concerned. Such separate agreement shall not affect any legitimate right of another ONTOCHAIN Beneficiary nor violate any of the provisions as set out in the GA and/or CA. The separate agreement shall ensure that the other ONTOCHAIN Beneficiaries have access to the Background and Results of the Selected Third Parties if needed for the Implementation of the Project or Exploitation of its own Results.

Selected Third Parties which obtain Access Rights in return shall fulfil confidentiality obligations at least as stringent as the obligations stated in the Consortium Agreement to be arranged in a separate confidentiality agreement between the Selected Third Parties and the ONTOCHAIN Beneficiaries concerned.

Access Rights may be requested by the Selected Third Party up to twelve (12) months after the end of the Research.

6.3.3 The Selected Third Party shall grant Access Rights on its Background and/or Results to the ONTOCHAIN Beneficiaries as far as such Background and/or Results are

needed for implementation of the Research and/or implementation of the ONTOCHAIN Project, and/or exploitation of the ONTOCHAIN Beneficiaries' Results.

6.3.3.1 Where any ONTOCHAIN Beneficiary has Access Rights on the Selected Third Party's Results and/or Background for implementation of the Research, such Access Rights shall be granted on a royalty-free basis.

6.3.3.2 Where Access Rights on Results and/or Background of the Selected Third Party are needed by ONTOCHAIN Beneficiaries in order to implement the ONTOCHAIN Project:

- Access Rights to the Selected Third Party's Results shall be granted on a royalty-free basis and shall comprise the right to sublicense such Results to the other selected third parties participating in the ONTOCHAIN Project;
- Access Rights to the Selected Third Party's Background shall be granted only if such Background is needed to use the Selected Third Party's Results to implement the ONTOCHAIN Project. Such Access Rights shall be granted on a royalty-free basis, and shall comprise the right to sublicense such Background to the other selected third parties participating in the research under the ONTOCHAIN project:
 - as far as these other selected third parties need to have access to such Background to use the Selected Third Party's Results to carry out their own research under the ONTOCHAIN Project; and
 - if no major interest opposes.

6.3.3.3 Where Access Rights on the Selected Third Party's Results and/or Background are needed by ONTOCHAIN Beneficiaries in order to exploit their Results, the conditions on which Access Rights will be granted shall be negotiated between the Selected Third Party and the ONTOCHAIN Beneficiary concerned and agreed in a separate written agreement.

Access Rights may be requested by the ONTOCHAIN Beneficiaries up to twelve (12) months after the end of the Research.

6.4 OPEN SOURCE

Any Result (including documentation, source code and application programming interfaces) shall be published with a permissive open source licence (e.g., Apache v2.0 or equivalent) within the ONTOCHAIN file repository (ies).

7 CONFIDENTIALITY

7.1 All information in whatever form or mode of communication, which is disclosed by a Party or an ONTOCHAIN Beneficiary (the "Disclosing Partner") to the other Party or to any ONTOCHAIN Beneficiary (the "Recipient") in connection with the Project during its implementation and which has been explicitly marked as "confidential" at the time of disclosure, or when disclosed orally has been identified as confidential at the time of disclosure and has been confirmed and designated in writing within 15 calendar days

from oral disclosure at the latest as confidential information by the Disclosing Party, is “Confidential Information”.

7.2 The Recipients hereby undertake for a period of four (4) years after the end of the Research:

- not to use Confidential Information otherwise than for the purpose for which it was disclosed;
- not to disclose Confidential Information to any third party (other than to its Affiliated Entities and Subcontractors) without the prior written consent by the Disclosing Partner, wherein the Recipient must ensure that an arrangement is in place prior to such disclosure that subjects the Affiliated Entities and/or Subcontractors to provisions at least as strict as provided in this Section 10;
- to ensure that internal distribution of Confidential Information by a Recipient, its Affiliated Entities, Subcontractors shall take place on a strict need-to-know basis; and
- to return to the Disclosing Partner, or destroy, on request all Confidential Information that has been disclosed to the Recipients including all copies thereof and to delete all information stored in a machine readable form to the extent practically possible. The Recipients may keep a copy to the extent it is required to keep, archive or store such Confidential Information because of compliance with applicable laws and regulations or for the proof of on-going obligations provided that the Recipient comply with the confidentiality obligations herein contained with respect to such copy for as long as the copy is retained.

7.3 The recipients shall be responsible for the fulfilment of the above obligations on the part of their employees, its Affiliated Entities or third parties involved in the Project having access to Confidential Information pursuant to this Section and shall ensure that they remain so obliged, as far as legally possible, during and after the end of the Project and/or after the termination of the contractual relationship with the employee or third party.

7.4 The above shall not apply for disclosure or use of Confidential Information, if and in so far as the Recipient can show that:

- the Confidential Information has become or becomes publicly available by means other than a breach of the Recipient’s confidentiality obligations;
- the Disclosing Partner subsequently informs the Recipient that the Confidential Information is no longer confidential;
- the Confidential Information is communicated to the Recipient without any obligation of confidentiality by a third party who is to the best knowledge of the Recipient in lawful possession thereof and under no obligation of confidentiality to the Disclosing Partner;
- the disclosure or communication of the Confidential Information is foreseen by provisions of the Multi-Beneficiary General Model Grant Agreement;

- the Confidential Information, at any time, was developed by the Recipient completely independently of any such disclosure by the Disclosing Partner;
- the Confidential Information was already known to the Recipient prior to disclosure without any confidentiality obligation to the Disclosing Partner, or
- the Recipient is required to disclose the Confidential Information in order to comply with applicable laws or regulations or with a court or administrative order.

7.5 The Recipient shall apply the same degree of care with regard to the Confidential Information disclosed within the scope of the Project as with its own confidential and/or proprietary information, but in no case less than reasonable care.

7.6 Each Party shall promptly advise the other Party or the concerned ONTOCHAIN Beneficiary in writing of any unauthorised disclosure, misappropriation or misuse of Confidential Information after it becomes aware of such unauthorised disclosure, misappropriation or misuse.

7.7 If any Party becomes aware that it will be required, or is likely to be required, to disclose Confidential Information in order to comply with applicable laws or regulations or with a court or administrative order, it shall, to the extent it is lawfully able to do so, prior to any such disclosure:

- notify the Disclosing Partner, and
- comply with the Disclosing Partner's reasonable instructions to protect the confidentiality of the information.

8 DISSEMINATION

- Each Party agrees that any dissemination activity (including publications, presentations, contributions to any standards organisation or open source code) by the Selected Third Party is subject to the prior written approval of the other Participating Partners and upon proper citation of the ONTOCHAIN project (cf. paragraph 6.4).
- By 30 days from its dissemination request the Selected Third Party will receive the approval to disseminate or the indication of how/when to proceed in the requested dissemination activity. The Selected Third Party has to be aware that a premature dissemination activity could negatively affect IPRs, as patent applications. Moreover, dissemination activities should be compliant with suggested EU commission guidelines about open access publishing.
- The Selected Third Party and the other ONTOCHAIN Beneficiaries are entitled to include the main issues and information regarding the Research in their reporting towards the European Commission, subject to prior written notification to the Cascade Funding Partner.
- Unless explicitly agreed by the Cascade Funding Partner, any dissemination of results (in any form, including electronic) must display the NGI emblem and the following text:

“This project has received funding from the European Union’s Horizon 2020 research and innovation program through the NGI ONTOCHAIN program under cascade funding agreement No 957338.”

9 CHECKS AND AUDITS

9.1 The Selected Third Party undertakes to provide any detailed information, including information in electronic format, requested by the European Commission or by any other outside body authorised by the European Commission to check that the Research and the provisions of this Agreement are being properly implemented.

9.2 The Selected Third Party shall keep at the European Commission disposal all original documents, especially accounting and tax records, or, in exceptional and duly justified cases, certified copies of original documents relating to the Agreement, stored on any appropriate medium that ensures their integrity in accordance with the applicable national legislation, for a period of five years from the date of payment of the balance specified in the grant agreements.

9.3 The Selected Third Party agrees that the European Commission may have an audit of the use made of the Financial Support carried out either directly by the European Commission staff or by any other outside body authorised to do so on its behalf. Such audits may be carried out throughout the period of implementation of the Agreement until the balance is paid and for a period of five years from the date of payment of the balance. Where appropriate, the audit findings may lead to recovery decisions by the European Commission.

9.4 The Selected Third Party undertakes to allow European Commission staff and outside personnel authorised by the European Commission the appropriate right of access to the sites and premises of the Selected Third Party and to all the information, including information in electronic format, needed in order to conduct such audits.

9.5 In accordance with Union legislation, the European Commission, the European Anti-Fraud Office (OLAF) and the European Court of Auditors (ECA) may carry out spot checks and inspections of the documents of the Selected Third Party, and of any recipient of Cascade Finding, including at the premises of the Selected Third Party, in accordance with the procedures laid down by Union law for the protection of the financial interests of the Union against fraud and other irregularities. Where appropriate, the inspection findings may lead to recovery decisions by the European Commission. The Articles 22 and 23 of the Multi-Beneficiary General Model Grant Agreement, also apply to the Selected Third Party.

10 EXPLOITATION

As also mentioned in the previous chapter, the EU Commission gives high priority that results of RIA projects generate sustainable business. Most importantly, ONTOCHAIN aims towards the development of a sustainable blockchain ecosystem. Hence, before

the end of this subproject, an exploitation agreement will be signed between the ONTOCHAIN consortium and the third party about common exploitation activities of the subproject results, subject to a negotiation process.

11 TERMINATION

11.1 The Cascade Funding Partner can terminate this Agreement with immediate effect through written notice to the Selected Third Party and to the other Participating Partners:

- if the Selected Third Party is in breach of any of its material obligations under this Agreement, which breach is not remediable, or, if remediable, has not been remedied within thirty (30) days after written notice to that effect from the party not in breach,
- if, to the extent permitted by law, the Selected Third Party is declared bankrupt, is being wound up, is having its affairs administered by the courts, has entered into an arrangement with its creditors, has suspended business activities, or is the subject of any other similar proceeding concerning those matters, or
- if the Selected Third Party is subject to an Event of Force Majeure, which prevents the Selected Third Party from correct performance of its obligations hereunder and such circumstances have lasted, or can reasonably be expected to last more than 3 months.

11.2 Access Rights granted to the Selected Third Party shall cease immediately upon the effective date of termination.

12 CONCLUDING CONDITIONS

12.1 The Parties will not sign Annex 1, and the terms of this Agreement (for the sake of clarity this includes Annex 1) will not be effective, until the Cascade Funding Partner has received written confirmation from each Participating Partner that it agrees to their content. This written confirmation can be given by each Participating Partner sending by email or facsimile to the Cascade Funding Partner.

Once each written confirmation is given by each Participating Platform Partner, any ancillary agreements, amendments, additions or modifications to this Agreement shall be made in writing and signed by the Parties, but will only become effective after the Cascade Funding Partner has received written confirmation from each Participating Partner that it agrees to their content, such written confirmation to be given in the manner set out at the above paragraph.

12.2 The Selected Third Party's consistent level in its respective field of expertise played a key role in the selection of the Selected Third Parties to implement the Research. Any total or partial transfer of provisions and the rights and duties it entails in the prior formal approval of all signatories.

12.3 Any subcontract by the Selected Third Party concerning some of its tasks under this Agreement requires the prior written consent of the Cascade Funding Partner and does not affect its own obligations resulting from this Agreement. The Selected Third Party shall secure that the subcontractor will comply with all obligations – especially coming from the Multi-Beneficiary General Model Grant Agreement, and with regard to confidentiality – resulting from this Agreement and that the results attained by the subcontractor will be available in accordance with Section 5.

12.4 The Agreement will enter into force on the date of the last signature by the Parties.

12.5 This Funding Agreement shall continue in full force and effect until complete fulfilment of all obligations undertaken by the Parties. However, this Funding Agreement or the participation of one or more Parties to it may be terminated in accordance with the terms of this Funding Agreement.

12.6 Parties that fail to meet reporting/mandatory activities deadlines must be aware that their non-respect of reporting/mandatory activities deadlines may lead to their costs being considered zero for the corresponding period and they will be excluded from the respective payment.

12.7 In the event that a breach by a Party of its obligation under this contract is identified by the Cascade funding Partner such as improper implementation of the research, the Cascade funding Partner will formally notify the considered Party to remedy this breach. If it is not remedied in reasonable time, the Cascade funding Partner may decide to declare the Party to be a defaulting Party and on the consequences thereof which may include termination of its participation and reimbursement of all or part of the financial provision.

12.8 In the event of the termination of the contract by a Party before its legal termination as set in the Annex 1, the Cascade funding Partner may decide to declare the Party to be a defaulting Party and on the consequences thereof which may include reimbursement of all or part of the financial provision.

12.9 If any provision of this Agreement is determined to be illegal or in conflict with the applicable law, the validity of the remaining provisions shall not be affected. The ineffective provision shall be replaced by an effective provision which is economically equivalent. The same shall apply in case of a gap.

12.10 This Agreement shall be governed by and construed in accordance with the laws of Belgium.

12.11 Any disagreement or dispute which may arise in connection with this Agreement and which the Parties are unable to settle by mutual agreement will be brought before the courts of Brussel, Belgium.

Done in two originals, one for each Party.

 Legal office address: [ADDRESS and COUNTRY]

Hereinafter referred to as “Selected Third Party”;

Hereinafter sometimes individually or collectively referred to as “Party” or “Parties”.

Whereas the Cascade Funding Partner and the Selected Third Party have agreed the main terms and conditions to implement the Research in the course of the ONTOCHAIN Project by signing the Standard Research Contract to which this Specific Contract is annexed.

Now therefore it has been agreed as follows:

1. ENTRY INTO FORCE

The specific contract shall enter into force on the day of its signature by the last Contracting Party as a rule of thumb no more than 15 days after the announcement of the selection. The Cascade Funding Project Manager/ Authorized representative of the consortium shall sign this contract, only after all of the following documents have been received from the Selected Third Party:

- [if a legal entity]:

- The original signed Declaration of Honour (as given in Annex 6 of the Standard Research Contract) by the Project Manager/Authorized representative;
- The SME Declaration form (as given in Annex 7 of the Standard Research Contract);
- The copy of the original Extract of SME;
- The Proof of VAT;
- The Bank Information Form (as given in Annex 3 of this Contract).
- The Estimated budget for the action (as given in Annex 2 of this Contract)

- [if a Team of Natural persons]:

- The original signed Declaration of Honour (as given in Annex 6 of the Standard Research Contract) by the Project Manager/Authorized representative;
- Copy of ID-card or Passport of the legal representative(s) of the Team;
- Bank Information Form (as given in Annex 3 of this Contract).
- Estimated budget for the action (as given in Annex 2 of this Contract)
- A copy of the signed team agreement with the denomination of the Authorized representative.

- [if a Consortium of legal entities]:

- The original signed Declaration of Honour (as given in Annex 6 of the Standard Research Contract) by the Project Manager/Authorized representative;
- SME Declaration form (as given in Annex 7 of the Standard Research Contract) if applicable;
- Copy of the original Extract of SME if applicable;
- Proof of VAT;
- Bank Information Form (as given in Annex 3 of this Contract).
- Estimated budget for the action (as given in Annex 3 of this Contract)
- If a group of legal entities, copy of the signed consortium agreement with the denomination of the Authorized representative.

All documents shall be sent to the Cascade Funding Partner via email to the following address: caroline.barelle@eurodyn.com as a rules of thumbs no more than 15 days after the announcement of the selection

2. TERMS AND CONDITIONS FOR THE RESEARCH

The Selected Third Party shall implement the Research in accordance with the following:

Description of the Research	
Acronym

Description	[Complete]
Expected outcomes	[Complete]
Deliverable	[Complete]
[Add as many tasks as necessary]	

The expected research outcomes are listed hereafter

Expected research outcomes	
Expected results in terms of Research	[Complete]
Expected results in terms of IPR, software, know-how	[Complete]

The following deliverables are mandatory and requested in addition to those listed in the description of implementation of the research. They are linked to the release of the funding.

Mandatory deliverables and reports		
Deliverable (number)	Deliverable/ Report name	Delivery date

D1	SoA overview, use case analysis and preliminary technical specification of the solution	M2
D2	Detailed technical specification of the solution, software implementation work plan, , and demo scenarios, preliminary business plan..	M4
D3	Implementation, deployment in appropriate ONTOCHAIN platform, testing, demonstration and validation.	M8
D4	Modularised software components ready for distribution, full documentation for developers/users, final business plan	M10

The following complementary activities are also linked to the release of the funding.

Mandatory complementary activities
<p>The selected third Party(ies) attend several mandatory internal events organised with the ONTOCHAIN Consortium:</p> <ul style="list-style-type: none"> -Kick-off event devoted to knowing the different Third Parties and their foreseen contribution to ONTOCHAIN. - Meeting for the set-up of clear KPIs that will be linked to the funding of the selected Third party (ies). - Midterm event devoted to the follow up of the progress of the Third Party (ies) according to the defined KPIs with a pitch contest where the Third Party (ies) will present their project outcomes in particular their prototype and their deployment scenarios. -Final event with pitch contest where the Third Parties will present their solution in particular their modularised software components ready for distribution

The IPR background of the third party (ies) is described hereafter:

Third party(ies) IPR Background	
Selected Third Party Partner 1 - Project Manager	[Complete]
Selected Third Party Partner 2	[Complete if relevant]

Selected Third Party Partner 3	[Complete if relevant]

Financial conditions	
Financial Support	-Team of natural persons: 89 625€ -Legal entity(ies): 119 500€
Schedule of payment	- Pre-financing:M2 - First Interim payment:M4 - Second interim payment: M8 - Final payment:M10
Payment conditions	<ul style="list-style-type: none"> ○ <u>Beginning of the implementation and Pre-financing:</u> During the first weeks of the project implementation, each team will define with their coaches a set of clear and objective KPIs to be achieved and linked with the funding. These KPIs are different for each team and are related to the solution to be implemented. These KPIs will help measure the progress if any, but also the commitment and involvement of the teams (i.e. attending periodic call meetings with the coaches, meeting the deadlines for reporting, etc.). After this KPIs definition, a pre-financing of 30% will be released. ○ <u>First midterm review linked to the delivery of deliverable D2 and 2nd payment:</u> At first midterm of the project implementation, the coaches will assess the KPI's percentage of execution of the project on the basis of the evaluation of the deliverable D2. A 100% completion of the KPIs for the related period will unlock the total of the 2nd payment which is 20% of the total amount. A lower completion of the tasks will launch the proportional payment. If the KPIs for the related period are met by less than 50%, the payment will be retained until KPIs for the period are assessed as completely reached. If less than 25%, the

	<p>teams will be automatically disqualified from the process.</p> <ul style="list-style-type: none"> ○ <u>Second midterm review linked to the delivery of deliverable D3 and 3rd payment:</u> At the second midterm of the project implementation, the coaches will assess the KPI's percentage of execution of the project on the basis of the evaluation of the deliverable D3. A 100% completion of the KPIs for the related period will unlock the total of the 2nd payment which is 20% of the total amount. A lower completion of the tasks will launch the proportional payment. If the KPIs for the related period are met by less than 50%, the payment will be retained until KPIs for the period are assessed as completely reached. If less than 25%, the teams will be automatically disqualified from the process. ○ <u>Final review and last payment:</u> At the end of the project implementation, third parties will be paid according to their overall completion of KPIs materialised by the deliverable D4. A final event will be used to evaluate third parties on a face to face pitch contest. The third parties will present their implemented solution, and their business plan in the context of ONTOCHAIN. <p>Overall, failing to meet any of the research conditions and milestones aforementioned may result to an early discontinuation of the project and the corresponding disruption of the funding</p>

3. MISCELLANEOUS

3.1 This Specific Research Contract, supplemented by the Standard Research Contract and its Annexes 1 to 8 included, constitutes the sole and complete understanding of the Parties with respect to its subject matter and supersedes all prior or contemporaneous communications between the Parties concerning such subject matter. This Specific Research Contract will be governed and construed according to the choice of governing and constructive law set forth in the Standard Research Contract.

3.2 Save to the extent expressly modified in this Specific Research Contract, all of the terms of the Standard Contract and Annexes 1-8 included shall apply to this Specific Contract. Save to the extent expressly specified in this Specific Contract, all capitalized terms used in this Specific Contract which are defined in the Standard Research Contract shall have the meaning given in the Standard Research Contract.

3.3 The terms of Clause 11.1 of the Standard Research Contract will apply to the signing and enforceability of this Specific Research Contract.

Done in two originals, one for each Party.

ANNEX 1.5 - THIRD PARTY(IES) PROPOSAL

[to be integrated]

ANNEX 1.6- DECLARATION OF HONOUR

APPLICANT DECLARATION OF HONOUR

Title of the proposal: _____

On behalf of

_____ (Name of the third party)
established in _____ (legal address), SME VAT
number _____, [1] represented for the purposes of signing and submitting
the proposal and the Declaration of Honor by _____
(Name of the legal representative),

By signing this document, I declare that

- 1) I have the power of legally binding the above mentioned party on submitting this proposal.
- 2) The above mentioned party has not submitted any other proposal under ONTOCHAIN Open Call #2 – Foundation. In case the above mentioned party has submitted more than one proposal in this Open Call, all associated proposals will be automatically excluded from the evaluation process.
- 3) The party(ies) that I legally represent is(are) fully aware and duly accept all ONTOCHAIN rules and conditions as expressed in ONTOCHAIN Open Call documents and all Annexes, and will fully respect any evaluation decision and proposal selection under ONTOCHAIN activities.
- 4) If relevant, the information included in the Annex 7: SME Declaration Form is true and legally binding.

5) All provided information in this declaration is true and legally binding.

Third party(ies) representative Contact Information:

Title (Mr, Mrs, Dr.)	[Complete]
Name	[Complete]
Surname	[Complete]
Position in the organisation (If relevant)	[Complete]

Telephone	[Complete]
Mobile	[Complete]
Signature and stamp of the organisation (if relevant)	[Complete]

DECLARATION OF HONOR ON EXCLUSION CRITERIA AND ABSENCE OF CONFLICT OF INTEREST

By signing this declaration of honour, I declare that all provided information below is true and legally binding both for me and for the organisations that I legally represent:

1. I declare that me and/or the organisations that I legally represent (If relevant) is not in one of the following situations:

a) it is bankrupt or being wound up, is having its affairs administered by the courts, has entered into an arrangement with creditors, has suspended business activities, is the subject of proceedings concerning those matters, or is in any analogous situation arising from a similar procedure provided for in national legislation or regulations;

b) it or persons having powers of representation, decision making or control over it have been convicted of an offence concerning their professional conduct by a judgment which has the force of res judicata;

c) it has been guilty of grave professional misconduct proven by any means which the contracting authority can justify including by decisions of the European Investment Bank and international organizations;

d) it is not in compliance with its obligations relating to the payment of social security contributions or the payment of taxes in accordance with the legal provisions of the country in which it is established or with those of the country of the contracting authority or those of the country where the contract is to be performed, to be proved by the deliverance of official documents issued by the local authorities, according to the local applicable rules;

e) it or persons having powers of representation, decision making or control over it have been the subject of a judgment which has the force of res judicata for fraud, corruption, involvement in a criminal organization or any other illegal activity, where such illegal activity is detrimental to the Union's financial interests;

f) is subject to an administrative penalty for being guilty of misrepresenting the information required by the contracting authority as a condition of participation in a grant award procedure or another procurement procedure or failing to supply this information or having been declared to be in serious breach of its obligations under contracts or grants covered by the Union's budget.

2. I declare that the natural persons with power of representation, decision-making or control over the above-mentioned SME are not in the situations referred to in a) to f) above;

3. I declare that:

- a) Neither myself or any person (s)/organisation (s) that I represent is (are) subject to an ONTOCHAIN conflict of interest;
- b) I have not made false declarations in supplying the information required by participation in the Open Call of ONTOCHAIN Project or does not fail to supply this information;
- c) I am not in one of the situations of exclusion, referred to in the abovementioned points a) to f).
- d) I am aware and fully accept all ONTOCHAIN condition and rules as expressed in ONTOCHAIN Open Call documents.

4. I certify that I or the organisation(s) that I represent:

- o Is (are) committed to participate in the abovementioned project;
- o has stable and sufficient sources of funding to maintain its activity throughout its participation in the above-mentioned project and to provide any counterpart funding necessary;
- o has or will have the necessary resources as and when needed to carry out its involvement in the above-mentioned project.

<p>Full name: _____</p> <p>On _____ behalf _____ of _____</p> <p>SME: _____</p>	<p>Signature and stamp (if applicable)</p> <p style="text-align: center;">[Complete]</p>
<p>Done at (place) _____ the (day) _____ (month) _____ (year)</p>	

[1] VAT is mandatory during the contract preparation for legal entities. Failure of providing a valid VAT of the specific SME will result in automatic rejection of the proposal.

ANNEX 1.7- SME DECLARATION FORM

Declaration of SME Status

Precise identification of the SME:

Name or Business name	[Complete]
Address (of registered office)	[Complete]
Registration / VAT number	[Complete]
Names and titles of the principal director(s)[1]	[Complete]

Type of enterprise:

Tick to indicate which case(s) applies to the applicant enterprise:

<input type="checkbox"/>	Autonomous enterprise	My enterprise holds less than 25% (capital or voting rights) in another enterprise and/or another enterprise holds less than 25% in mine. <i>* Note: there are exceptions for certain types of investors. See Article 3(2)(D) in the Annex of Commission Recommendation 2003/361/EC.</i>
<input type="checkbox"/>	Partner enterprise	My enterprise holds at least 25%, but no more than 50% in another enterprise and/or another enterprise holds at least 25%, but no more than 50%, in mine.
<input type="checkbox"/>	Linked enterprise	My enterprise holds more than 50% of the shareholders' or members' voting rights in another enterprise and/or another enterprise holds more than 50% in mine.

Data used to determine the category of enterprise:

Calculated according to Article 6 of the Annex to the Commission Recommendation 2003/361/EC on the SME definition.

Reference period (*):		
Headcount (AWU[3])	Annual turnover (€)(**)	Balance sheet total (€)(**)
[Complete]	[Complete]	[Complete]

(*) All data must be relating to the last approved accounting period and calculated on an annual basis. In the case of newly-established enterprises whose accounts have not yet been approved, the data to apply shall be derived from a reliable estimate made in the course of the financial year.

(**) EUR 1000

Signature

Name and position of the signatory, being authorised to represent the enterprise:

[Complete].....

"I declare on my honour the accuracy of this declaration."

"I declare on my honour that in case of change affecting my SME status, I will immediately inform the Agency."

"I declare having taken knowledge of the Commission Recommendation 2003/361/EC on the SME definition."

Signature:

[Complete]

[1] Chairman(CEO), Director-General or equivalent.
 [2] Annual Working Units = number of full-time equivalent employees.

ANNEX 2- ADMINISTRATIVE FORM

Find hereafter the list of administrative information that you need to fill directly in the [F6S portal](#) to apply.

ADMINISTRATIVE FORM

This administrative form has the following mandatory sections:

- SECTION 1: Proposal identification
- SECTION 2: Topic selection
- SECTION 3: Administrative Data
- SECTION 4: Proposal Description
- SECTION 5: Final questions

Documents to be reviewed when preparing the application:

- ONTOCHAIN Background, a document describing the ONTOCHAIN project context, available at: <https://ontochain.ngi.eu/apply>.
- ONTOCHAIN Open Call 3 Text, a document that provides the technical details for the ONTOCHAIN Open call 3 available at: <https://ontochain.ngi.eu/apply>
- Guide for Applicant, defining the Open Call Terms & Conditions available at: <https://ontochain.ngi.eu/apply>
- Proposal Description Template, a mandatory and editable document to describe your proposal, available at: <https://ontochain.ngi.eu/apply>.
- ONTOCHAIN Additional Applicant(s) Template, only needed if your proposal involves more than 3 individuals (Natural persons) or/and more than 3 organisations (Legal entities), available at: <https://ontochain.ngi.eu/apply>.
- Indicative Sub-grant Agreement Form, a template of the sub-grant agreement that the selected applicants will be requested to sign, available at: <https://ontochain.ngi.eu/apply>. It is not necessary to send this document at the time of application.

If you have any questions, feel free to contact the ONTOCHAIN team (ontochain@ngi.eu). Failure to provide the required information in all sections will result in disqualification.

SECTION 1: PROPOSAL IDENTIFICATION

1. Proposal Title *

2. Proposal Acronym *

3. Keywords *

Please select the keywords related to your proposal

- Trustworthy hardware & manufacturing
- Network & Transport infrastructure (Including routing, P2P & VPN)
- Software Engineering (Including protocols, interoperability and fundamentals e.g.cryptography, algorithms, proofs)
- Operating Systems, firmware and virtualisation
- Measurement, monitoring, analysis & abuse handling
- Middleware, distribution, deployment, operations, DNS, authorisation, authentication, reputation systems
- Decentralised solutions, blockchain, distributed ledger
- Data & AI
- Services & Applications (e.g. email, instant messaging, search, video chat, collaboration, community)
- Vertical applications
- Trustworthiness (Including: transparency, auditability and security)
- Resilient, robust and dependable
- Privacy and confidentiality
- Empowerment and self-determination
- Inclusiveness, accessibility diversity and democracy
- Permission less innovation, decentralisation and level playing field
- Social good, fairness and ethical behaviour
- Sustainability/Eco-friendliness
- Well-balanced economy

SECTION 2: TOPIC SELECTION

There are 15 different topics that you can choose from to apply to ONTOCHAIN. If your project fits more than one topic, please select the most relevant one. *

- A1 - Service Integration (Gateways APIs) for ONTOCHAIN applications
- A2 - Semantic Matching and Reasoning
- A3 - Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services
- B1 - Semantic Digital Logbooks for Companies, Buildings, Cars or similar
- B2 - Decentralised Fact Checking and Data Credibility for Social Content
- B3 - Decentralized Online Semantic Social Networks
- B4 - Semantic energy data management
- B5 - Smart City Applications Relying on Trustworthy Semantic Metadata
- B6 - Automotive, e.g., electric vehicle charging, road side management, car insurance, communication interoperability
- B7 - Distribution Logistics / Supply Chains Using Trustworthy Semantic Data
- B8 - Data/Digital content /Multimedia marketplace, including social media
- B9 - Semantics-based DAO

- B10 - Decentralised Public Services & Common Goods
- B11 - Remote Presence/Working and Metaverse
- B12 - Any other application in synergy with ONTOCHAIN objectives

SECTION 3: ADMINISTRATIVE DATA APPLICANT(S)

4. You are applying as: *

Notice that as team of individuals (two or more natural persons), you will get a maximum of 89 625€.

Any other configuration involving legal entities can obtain up to 119 500€.

The funding will be automatically calculated according to the selection below.

- A single organization (legal entity)
- A group of individuals (team)
- A group of organisations (consortium)
- A group of individual(s) and organisation(s)

APPLICANT(S) INFORMATION (INDIVIDUAL(S))

Please fill in the following information about the individual(s) applying as a natural person(s).

WARNING: if in the previous question you indicated you apply as a legal entity, or consortium, do not fill the Individuals section.

Individual - Natural person 1

5. Name
6. Surname
7. E-mail
8. ID type (Citizen card, passport, or other)
9. ID number
10. Country of residence/work
11. Has been funded by the European Commission through H2020 before? (Grant or subgrant)
 - Yes
 - No
12. Has been funded by other NGI projects?
 - Yes
 - No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

13. Has recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

Individual - Natural person 2

14. Name

15. Surname

16. E-mail

17. ID type (Citizen card, passport, or other)

18. ID number

19. Country of residence/work

20. Has been funded by the European Commission through H2020 before? (Grant or sub grant)

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

21. Has been funded by other NGI projects?

- Yes
- No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

22. Has recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

Individual - Natural person 3

23. Name

24. Surname

25. E-mail

26. ID type (Citizen card, passport, or other)

27. ID number

28. Country of residence/work

29. Has been funded by the European Commission through H2020 before? (Grant or subgrant)

- Yes
- No

30. Has been funded by other NGI projects?

- Yes
- No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

31. Has recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

APPLICANT(S) INFORMATION (ORGANISATION(S))

Please fill in the following information about the organisation(s) applying as legal entity/ies

Organisation - Legal entity 1

32. Entity legal name

33. Legal status of your organisation

- Secondary or Higher education establishment
- Research organisation
- SME
- Large enterprise
- Public Body
- A non-for profit organisation, association, NGO
- Foundation
- International organisation
- Other? Please specify

34. Country

35. VAT number

36. Incorporation year

37. Contact person email

38. Has the legal entity been funded by the European Commission before? (Grant or subgrant)

- Yes
- No

39. Has the legal entity been funded by other NGI projects?

- Yes
- No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

40. Has the legal entity recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

Organisation - Legal entity 2

41. Entity legal name

42. Legal status of your organisation

- Secondary or Higher education establishment
- Research organisation
- SME
- Large enterprise
- Public Body
- A non-for profit organisation, association, NGO
- Foundation
- International organisation
- Other? Please specify

43. Country

44. VAT number

45. Incorporation year

46. Contact person email

47. Has the legal entity been funded by the European Commission before? (Grant or subgrant)

- Yes
- No

48. Has the legal entity been funded by other NGI projects?

- Yes
- No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

49. Has the legal entity recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

Organisation - Legal entity 3

50. Entity legal name

51. Legal status of your organisation

- Secondary or Higher education establishment
- Research organisation
- SME
- Large enterprise
- Public Body
- A non-for profit organisation, association, NGO
- Foundation
- International organisation
- Other? Please specify

52. Country

53. VAT number

54. Incorporation year

55. Contact person email

56. Has the legal entity been funded by the European Commission before? (Grant or subgrant)

- Yes
- No

57. Has the legal entity been funded by other NGI projects?

- Yes
- No

If yes, please indicate which one, explain the overlaps and differences with the current proposal and indicate the total funding amount received.

58. Has the legal entity recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to?

- Yes
- No

If yes, please indicate which one and explain the overlaps and differences with the current proposal

Additional Applicant(s)?

59. If your proposal has more than 3 applicants participating as individuals (Natural persons) or/and more than 3 applicants participating as organisations (Legal entities), please upload the Annex 3 – Additional Applicant(s) Template, filled with the information about the applicant(s) that did not fit in this form. (Max file size 30MB.)

UPLOAD FILE

CONTACT PERSON (COORDINATOR)

Contact person for the proposal and coordination of the project

Notice that the result of the evaluation will be sent to this person.

60. Full Name *

61. Entity (If applicable) *

62. E-mail *

63. Phone number * (Include country code)

SECTION 4: ETHICS

4.1. HUMAN EMBRYOS/FOETUSES

64. Does your innovation project involve Human Embryonic Stem Cells (hESCs)? *

- Yes
- No

65. Does your innovation project involve the use of human embryos? *

- Yes

- No

66. Does your innovation project involve the use of human foetal tissues / cells? *

- Yes
- No

4.2. HUMANS

67. Does your innovation project involve human participants? *

- Yes
- No

68. Are they volunteers for social or human sciences research? *

- Yes
- No

69. Are they persons unable to give informed consent? *

- Yes
- No

70. Are they vulnerable individuals or groups? *

- Yes
- No

71. Are they children/minors? *

- Yes
- No

72. Are they patients? *

- Yes
- No

73. Are they healthy volunteers for medical studies? *

- Yes
- No

74. Does your innovation project involve physical interventions on the study participants? *

- Yes
- No

4.3. HUMAN CELLS / TISSUES

75. Does your innovation project involve human cells or tissues (other than from Human Embryos/ Foetuses)? *

- Yes
- No

4.4. PERSONAL DATA

76. Does your innovation project involve personal data collection and/or processing? *

- Yes
- No

77. Does it involve the collection and/or processing of sensitive personal data (e.g: health, sexual lifestyle, ethnicity, political opinion, religious or philosophical conviction)? *

- Yes
- No

78. Does it involve processing of genetic information? *

- Yes
- No

79. Does it involve tracking or observation of participants? *

- Yes
- No

80. Does your innovation project involve further processing of previously collected personal data (secondary use)? *

- Yes
- No

4.5. ANIMALS

81. Does your innovation project involve animals? *

- Yes
- No

4.6. THIRD COUNTRIES

82. In case non-EU countries are involved, do the innovation project related activities undertaken in these countries raise potential ethics issues? *

- Yes

No

83. Do you plan to use local resources (e.g. animal and/or human tissue samples, genetic material, live animals, human remains, materials of historical value, endangered fauna or flora samples, etc.)? *

Yes
 No

84. Do you plan to import any material - including personal data - from non-EU countries into the EU? *

Yes
 No

85. Do you plan to export any material - including personal data - from the EU to non-EU countries? *

Yes
 No

86. In case your innovation project involves low and/or lower middle income countries, are any benefits-sharing actions planned? Are they children/minors? *

Yes
 No

87. Could the situation in the country put the individuals taking part in the innovation project at risk? *

Yes
 No

4.7. ENVIRONMENT & HEALTH and SAFETY

88. Does your innovation project involve the use of elements that may cause harm to the environment, to animals or plants? *

Yes
 No

89. Does your innovation project deal with endangered fauna and/or flora and/or protected areas? *

Yes
 No

90. Does your innovation project involve the use of elements that may cause harm to humans, including innovation project staff? *

Yes
 No

4.8. DUAL USE

91. Does your innovation project involve dual-use items in the sense of Regulation 428/2009, or other items for which an authorisation is required? *

- Yes
- No

4.9. EXCLUSIVE FOCUS ON CIVIL APPLICATIONS

92. Could your innovation project raise concerns regarding the exclusive focus on civil applications? *

- Yes
- No

4.10. MISUSE

93. Does your innovation project have the potential for misuse of innovation project results? *

- Yes
- No

4.11. OTHER ETHICS ISSUES

94. Are there any other ethics issues that should be taken into consideration? *

- Yes
- No

95. If yes, please specify

96. Ethics issues *

- I confirm that I have taken into account all ethics issues described above

SECTION 5: PROPOSAL DESCRIPTION

97. Please upload your proposal in Portable Document Format (pdf). Use the official template available at: <https://ontochain.ngi.eu/apply>. Applicants using other kind of template/ document structure will be automatically ineligible.

UPLOAD PROPOSAL (Max file size 30MB.)*

SECTION 6: FINAL QUESTIONS

98. Acceptance of the ONTOCHAIN Open Call Terms & Conditions Full call documents available at ontochain.ngi.eu*

- By ticking this box, I confirm that we have reviewed, accept and comply with the ONTOCHAIN Open Call Terms & Conditions as defined in the Guide for Applicant
99. Authorisation to apply in the name of
- By ticking this box, I confirm the information submitted within this application is true. I am authorised to apply in the name of my entity/group of natural persons.
100. Conflict of interest avoidance with ONTOCHAIN consortium
- By ticking this box, I confirm the members of the team involved in the proposal are not employees of any of the legal partners or their associated/linked-entities identified in the Grant Agreement No. 957338 with the EC.
101. Fraudulent behaviour avoidance
- By ticking this box, I confirm the organisation(s) or individual(s) applying do not have convictions for fraudulent behaviour, other financial irregularities, unethical or illegal business practices.
102. Bankruptcy information
- By ticking this box, I confirm the participating organisation(s) do(es) not have been declared bankrupt or have initiated bankruptcy procedures.
103. Multiple submissions
- By ticking this box, I confirm that all the members involved in the proposal (natural persons/legal entities) are only submitting one proposal under this open call
104. European Commission Regulation No 651/2014, art. 2.18
- By ticking this box, I confirm the applicant(s) is not under liquidation or is not an enterprise under difficulty accordingly to the Commission Regulation No 651/2014, art. 2.18,
105. Originality and freedom to operate
- By ticking this box, I confirm the project is based on original works and going forward any foreseen developments are free from third party rights, or they are clearly stated
106. Applicant(s) eligibility
- By ticking this box, I confirm the applicant(s) is not excluded from the possibility of obtaining EU funding under the provisions of both national and EU law, or by a decision of both national or EU authority,
107. ONTOCHAIN Sub-grant Agreement
- By ticking this box, I confirm that we agree with the terms presented in the Indicative Sub-grant Agreement Form.

108. Double funding and operational capacity

- By ticking this box, I confirm the applicant(s) has/have not received funding for a similar project and that the applicant(s) has/have enough Operational Capacity to carry out the work. In addition, the applicant(s) give(s) consent to the ONTOCHAIN consortium to share the needed information (such as entities names and project details (abstract or the full proposal)) with other NGI RIAs projects for the only purpose of cross-checking that there is no double funding or operational capacity conflict.

109. How did you hear about ONTOCHAIN?

- News/Media
- Event
- E-mail
- NGI portal
- Referral
- Social media
- Through an ONTOCHAIN partner
- F6S portal
- European Commission portal
- Other

ANNEX 3- PROPOSAL DESCRIPTION TEMPLATE

PROPOSAL DESCRIPTION TEMPLATE THIRD OPEN CALL FOR PROPOSALS

Closing dates for proposals: 25 July 2022, 17:00 CEST

GENERAL INSTRUCTIONS ON THE TEMPLATE

This template is to be used for the ONTOCHAIN Open Call #3 submission procedure.

The structure of this template must be strictly followed when preparing your proposal. It has been designed to ensure that the important aspects of your planned work are presented in a way that will enable the experts to make an effective assessment against the evaluation criteria.

All proposers should organise their information as focused as possible, explaining at least the following aspects of their projects: overall description of the application; potential customers and markets; methods and approaches for customer engagement; a monetization approach potentially benefiting from an ONTOCHAIN-based coin and NFT minting services; description of detailed use cases scenarios; description of the ontologies and the semantic content used and semantic content handling solutions employed by the proposed application; resolution of the ownership (including preferably open source licensing approach for the results); positioning on the market against existing similar solutions/services; clear description of the obtained benefits when using the existing portfolio of ONTOCHAIN solutions, exactly which solutions and how would be used; data quality properties that will be achieved by the application solution; ONTOCHAIN's 3rd party solutions that are particularly relevant and will be used in the development part; time to market of the proposed solution/application

Please be aware that proposals will be evaluated as they were submitted, rather than on their potential if certain changes were to be made. This means that only proposals that successfully address all the required aspects will have a chance of being funded. There will be no possibility for significant changes to content, budget and team composition during grant preparation.

Total page limit: Sections 1, 2 and 3, together, should not be longer than 10 pages.

All tables, figures, references and any other element pertaining to these sections must be included as an integral part of these sections and are thus counted against this page limit.

The total page limit will be applied automatically; therefore you must **remove this instruction page** before submitting.

After the deadline, excess pages (in over-long proposals/applications) will not be taken into consideration by the experts.

The proposal is a self-contained document. Experts will be instructed to ignore hyperlinks to information that is specifically designed to expand the proposal, thus circumventing the page limit. Please, do not consider the page limit as a target! It is in your interest to keep your text as concise as possible, since experts rarely view unnecessarily long proposals in a positive light.

The following formatting conditions apply: The reference font for the body text is Arial. The use of a different font for the body text is not advised and is subject to the cumulative conditions that the font is legible and that its use does not significantly shorten the representation of the proposal in number of pages compared to using the reference font (for example with a view to bypass the page limit). The minimum font size allowed is 11 points.

Standard character spacing and a minimum of single line spacing is to be used. Text elements other than the body text, such as headers, foot/end notes, captions, formula's, may deviate, but must be legible.

The page size is A4, and all margins (top, bottom, left, right) should be at least 20 mm. Delete the guidance text in blue in each section.

ONTOCHAIN THIRD OPEN CALL FOR PROPOSALS

Acronym of your proposal

Full title of your proposal

Indicate to which main topic you are applying for.

If you address more than one topic, please indicate which the secondary ones are

Topic id	Topic description	Main topic (X)	Secondary topic (Y)
A1	Service Integration (Gateways APIs) for ONTOCHAIN applications		
A2	Semantic Matching and Reasoning		
A3	Energy-efficient and sustainable hosting infrastructure for the ONTOCHAIN software ecosystem and services		
B1	Semantic Digital Logbooks for Companies, Buildings, C		
B2	Decentralised Fact Checking and Data Credibility for Social Content		
B3	Decentralized Online Semantic Social Networks		
B4	Semantic energy data management		
B5	Smart City Applications Relying on Trustworthy Semantic Metadata		
B6	Automotive, e.g., electric vehicle charging, road side management, car insurance, communication interoperability		
B7	Distribution Logistics / Supply Chains Using Trustworthy Semantic Data		
B8	Data/Digital content /Multimedia marketplace, including social media		
B9	Semantics-based DAO		
B10	Decentralised Public Services & Common Goods		
B11	Remote Presence/Working and Metaverse		
B12	Any other application in synergy with ONTOCHAIN objectives		

TABLE OF CONTENT

1.	PROJECT SUMMARY	111
2.	APPLICANT BACKGROUND	111
3.	DETAILED PROPOSAL DESCRIPTION	112

Page count starts here-----

1. PROJECT SUMMARY

(Maximum 300 words)

-Describe your proposal at a high level. It has to be clear which one of the ONTOCHAIN Call 3 topics your proposal is focusing on.

Please note that this information may be used for dissemination purposes (only if your proposal is accepted and funded by the ONTOCHAIN program).

2. APPLICANT BACKGROUND

(Maximum 1 page)

○ ORGANISATION PROFILE (IF APPLICABLE, IN CASE A SINGLE ORGANISATION APPLY)

-Describe the organisation proposing the collaboration (size of organization, type of organization, how many people, capital, and market), main expertise and business area.

-List the members of your organisation that will directly work on the project (name, job title, main expertise & role in the project).

-Describe the main publications, projects, product/service portfolio, patents and relevant contributions in line with your proposal.

-Explain how your organisation profile matches the expertise needed for the ONTOCHAIN 3rd Call and especially according to the topic you have selected.

○ TEAM/CONSORTIUM PROFILE (IF APPLICABLE, IN CASE A TEAM OF NATURAL PERSONS/ CONSORTIUM OF LEGAL ENTITIES APPLY)

-Describe the natural persons/organisations part of the team/consortium proposing the collaboration (size of organization, type of organization, how many people, capital, and market if applicable), their main expertise and their business area.

-For each participating organisation, list the members of the organisation that will directly work on the project (name, job title, main expertise & role in the project).

-Describe the main publications, projects, product/service portfolio, patents and relevant contributions of the different natural persons/organisations part of the team/consortium in line with your proposal.

-Describe the team/consortium partners' synergies and their relevance for the proposed project, selected topic and ONTOCHAIN 3rd Call.

3. DETAILED PROPOSAL DESCRIPTION

(Maximum 8 pages)

3.1 CONCEPT AND OBJECTIVES

(Maximum 1 page)

-Describe the specific objectives of your proposal and explain the overall concept underpinning your proposed solution considering the ONTOCHAIN overall goals of trustworthy content handling and trustworthy data /service exchange

It should be clear:

- What are the needs?
- What ONTOCHAIN challenge are you solving with your proposal and how?
- What existing solutions (including your own) from the industry and from the scientific literature partly address the challenges?
- What new value proposition are you offering?
- What would be the benefits for ONTOCHAIN Large Scale Pilot.

3.2 PROPOSAL SOLUTION

(Maximum 2 pages)

-Give a description of the product/prototype with which you want to face the challenge.

-Indicate:

- How the solution will approach the challenge. You should particularly take care of the relevance of your solution according to the ONTOCHAIN architecture/specifications and explain how it can be integrated to the whole ONTOCHAIN ecosystem.
- What is the main differentiator of your proposition compared to the state of the art? You should put emphasis on its originality and innovation aspects.
- Explain the maturity of your product/prototype and the expected maturity at the end of the project (current and expected Technology Readiness Level)
- What will be the approach to validate your proof of concept? Indicate the size of the deployment, the test you intend to conduct (number of users, flat, devices ...)

3.3 EXPECTED IMPACT

(Maximum 2 pages)

-Describe how your proposal will contribute to:

- The objectives of the ONTOCHAIN project
- Add value to the ONTOCHAIN project.
- Create industrial impact at the European level and worldwide.

- Enhance your own business/competitiveness, with the help of the ONTOCHAIN ecosystem.
- Create socio- economic and environmental impact when relevant

- Present your dissemination and communication plan to maximise the impact foreseen
- Provide a description of your Data Management Plan

○ 3.4 BUSINESS MODEL AND SUSTAINABILITY

(Maximum 1 page)

- What is the business potential of the proposal?
- What is the business model? Explain how you will make money with this product or service (revenue model, etc.).
- Explain the next steps towards economic sustainability of your project and towards deploying your solution at a larger scale.

○ 3.6 IMPLEMENTATION

(Maximum 2 pages)

- Provide an overview of your overall work plan considering the 10 months' timeframe of ONTOCHAIN Open Call 3.
 - Provide the functionalities that are going to be delivered
 - Describe the activities that you will carry out in order to implement your project: objective, duration, implementation steps, resources available. Illustrate the timing of your activities using a Gantt diagram or similar.
- Use the table hereafter in order to help you present the requested information.

TABLE 2: EXAMPLE TABLE

Work plan tasks	Description	Starting Month	Ending Month

-Deliverables and milestones

Please add a list of deliverables and milestones (e.g. documents, reports, user manual, a tool ...) using the provided table.

TABLE 3: TABLE OF DELIVERABLES AND MILESTONES

№	Deliverable or milestone name	Description	Type	Delivery Month

-Indicate how you intend to manage your activities during your project lifecycle (10 months) including progress monitoring and risks management procedures

Pages count finishes here -----

ANNEX 4 - ADDITIONAL APPLICANT(S) TEMPLATE

Acronym of your proposal

Full title of your proposal

1. ADDITIONAL APPLICANT(S) PARTICIPATING AS INDIVIDUAL(S) (NATURAL PERSON)

Information type	Fill this column
Name:	
Surname:	
E-mail:	
ID type of document:	
ID number:	
Country of residence/work:	
Has been funded by the European Commission through H2020 before? (Grant or subgrant) (Yes/No)	
Has been funded by other NGI project? (Yes/No) If yes, please indicate which one and explain the overlaps and differences with the current proposal.	
Has recently applied to an NGI call or another EC funding instrument that is under evaluation or plans to apply to? (Yes/No) If yes, please indicate which one and explain the overlaps and differences with the current proposal.	

Copy and add as many tables as applicants participating as natural persons which did not fit in the F6S form.

2. ADDITIONAL APPLICANT(S) PARTICIPATING AS ORGANISATION(S) (LEGAL ENTITY)

Information type	Fill this column
Entity legal name	
Legal status of your organisation (Indicate only one type) <ol style="list-style-type: none"> 1. Secondary or Higher education establishment 2. Research organisation 3. Large enterprise 4. Small or medium enterprise 5. Public body 6. A non-profit organisation, association, NGO 7. Foundation 8. International organisation 9. Other 	
VAT number	
Incorporation year
